MANSELL QUALIFIES

With this year's Grand Prix season edging over-clover, doubts are being expressed as to whether Martech's long-awaited *Highway Manse* licence is going to materialise on the 64 in time for the second Grand Prix of the year in Mexico on April 3.

Originally due out in November 1987, it appears that the 64 version of the game has been hit by the old "programming problem" bug, although the finished product has just appeared on other formats.

According to Martech's David Martin, "while there have been terrific delays on the 64, we're still hoping that it'll be ready in time for an Easter launch. We are getting very close to completion now so we're just keeping our fingers crossed."

Us too, Dave, us too.

HOOPS THAT GIRL

Where is she? We've been counting the moments until that wonderful woman, Halo Jones, finally steps out of the pages of Alan Moore's futuristic cartoon world, the Hoop, and onto the screens of a nation's 64s. It was back in December that we first told you that Halo was a comin' your way, courtesy of Piranha. Eventually our daily wailing phone calls to Piranha HQ have yielded the following horrible information: *The Ballad Of Halo Jones* hasn't even begun to be programmed on the 64. The powers that be have decided in their wisdom to complete the Amstrad and (ughhh) Speccy versions before even embarking on the 64 work, so we won't be likely to be seeing our 'Alo much before June. June!! So, just to keep y'all going till then we thought we'd just print a glorious technicolour cut-out-a'-stuff-under-your-pillow pic of the woman herself.

ON COLLISION COURSE

The skies over London are chock-a-block full of shiny metal and the papers daily report of "air misses" due to computer failures, overcrowded airspaces, not-very-state-of-the-art radar equipment and not-very-awake air traffic controllers. So what better time for Hewson to announce the release of an air traffic control sim.

HALO JONES

ROBOCOP COIN-OP

News reaches us that we may soon be seeing an arcade game based on the brilliant cop-schlock movie *RoboCop*. As already revealed in Buzz, Ocean are to convert the Paul Verhoeven movie, set in the strife-torn Detroit of the near-future, for the home market. But it now transpires that the shrewd Manchester-based company's deal effectively prevents anyone but them from converting — or granting licences to convert — the movie for the coin-op market. Buzz understands that negotiations are currently underway between Ocean and a certain leading coin-op company which seem likely to lead to a coin-op *RoboCop* hitting the streets over the coming months. You heard it here first.

Traffic Control, you get to take over from these overworked, underpaid and highly stressed folk in the control towers who are given the responsibility of ensuring that all the hundreds of aircraft which converge over London get themselves into neat orderly queues for landing. You get half an hour to land any one of a whole variety of aircraft, including Concorde, and you'd better be prepared for emergency

landings, radar interference, abortive take-offs, aircraft running short of fuel and, of course, the much-talked-about "air miss" (where two aircraft find themselves travelling on collision course and are forced to take unplanned evasive action).

So drape your jacket over that chair, wipe that sweat from your brow, and keep your eyes on that screen; remember, it's their lives in your hands — poor ol' them!

MASTERTRONIC FIX-UP

Whe says those big impersonal software houses are . . . well, big and impersonal, really? You do? Well, prepare to eat those words, buddy, 'cos here's a story that'll touch you to the bottom of your heart.

Once upon a time a young man by the name of Andrew Collett decided that, at eight years old, it was high time that he had a

computer game based on his ideas made available to the general public. So he wrote to the Beeb's answer to the lamp game, Jimmy Saville, and asked if he could "fix" for Andy's game concept, *Super Trolley*, to be transformed into a real, live, commercially-released game.

Well, seems that Jimmy liked the idea, and got in touch with those big-hearted folk at Mastertronic and persuaded them to produce it.

The hero of *Super Trolley* works in a supermarket, and is in charge of shelf-stacking and other like tasks, all of which have to be earned out within a time limit.

Anybody who was watching "Jim 'n' Fix It" on the goopie-box on Saturday March 12 will have seen how Jim, and Mastertronic, fixed it for Andrew. And if you'd like to invest in *Super Trolley*, it is due out any day now, and will retail for the sum of £1.99, on, of course, the Mastertronic label. And, just in case you're not already felling all soft and mushy, all of Andrew's royalties from sales of the game are going to the Great Ormond Street hospital for sick children.

ROBTEK TERMINATING LICENCE

Robtek have acquired a licence to bring out a conversion of the old Arnie Schwarzenegger blockbuster, *Terminator*.

Apparently Robtek have an arrangement with an American organisation, Key-punch, whereby the Americans set up three him licences for Robtek over the course of a year. And so it came to pass that, around Christmastime, Key-punch picked up the rights to this classic, if now a wee bit dated, Arnie action pic for Robtek.

According to a spokesman for the company, we should see their conversion of *Terminator*, on their Diamond Games label, out on the streets around Autumntime. If it will definitely be released for Amiga, and possibly also for the 64.

TIME SCANNER SIGNED

Activision have just announced that Autumn will see the release for the home market of their conversion of the late Sega pinball coin-op, *Time Scanner*. With incredibly realistic flipper, bump-bar and ball movement, *Time Scanner* will be a must for all those people who've always wanted a pie-table in their bedroom but couldn't afford one or couldn't get it through the door.

ARCADE AVERAGE

With all these recent updates of classic coin-op games being churned out, it was only a matter of time before someone started producing real lamsons, taking old games, tarting up the graphics and presenting them as home versions of the originals. *Galaga '88*, by Namco, takes the classic *Galaga* formula, and . . . well, doesn't really do very much with it, apart from attacking fairly mundane new backdrops on and adding a couple of piffing enhancements. It's not that it's bad, so much as that it's just nothing very much different from what went before. Still, we bet you'll be seeing a lot more of these as other coin-op companies hop on the "ten years later" bandwagon. Be warned.

COMMODORE CELEBRITIES SHOW-UP

This year's Commodore Show, which will be held at the Hovvoti, Hammarasmihi, from Friday June 3 to Sunday June 5, will be featuring some special guests as well as the usual array of stalls and exhibitors. According to organizers Database, there will be personal appearances by Olympic Gold Medal Javelin-thrower Teese Saunderson, wrinkly '60's pop idol Adam Faith and "big names from Chelsea FC" (if there are any left). And, if that isn't enough to set your pulses racing, there are also some "mystery guest appearances" promised. All this and a feast of wondrous computer mayhem too — who could ask for anything more?

BUZZ

Activision To Distribute Micro-millions of Top US software Micro-millions have just signed an agreement with Activision which will result in Micro-millions products becoming available over here for the first time. This month will see the UK release of four of their games. *Blackjack Academy* is card-playing game, *Firepower* is tank fighting game, *Fantasy* is a fantasy role-playing game, and *Wizardry* is a fantasy role-playing game.

BUZZ

NINJA II

O.K., O.K., you neasy bunch, we knew you all really want a sneak preview of System 3's follow-up to the arcade adventure of the millennium *The Last Ninja*—so here it is! *Ninja II*, as exclusively revealed in *Buzz* a couple months back, beams our dark-clad hero into latterday Manhattan, where his old enemy, the evil Shogun, has been reincarnated as a Tong leader in Chinatown. But before he gets anywhere near Shogun, he'll have to make his way through some very mean streets and past some very nasty modern opponents. With numerous refinements and a time limit, *Ninja II* shows every sign of being a massive hit. According to a "spokesperson", we should be seeing the finished product in "early Summer". We can't wait.

SUPER HANG-ON

VEEEE... OWWWWW! One minute a mere spot on the horizon, the next zooming right into your living room and onto the screen of your G4, it's the conversion-of-the-update-of-the-coin-op-hit-of-the-sport, *Super Hang-On*, brought to you courtesy of Electric Dreams. We can't promise you that you'll get to sit astride a mega-impressive motor-bike console as you play like Sega gave you in the arcades, but we're sure that anybody who's into experiencing the thrills, spills, tyre-squeals and fast-wheels of motorcycle racing will be more than happy to give this a go or two trillion in the privacy of their own homes. Due out nowabouts in the G4, for speedfreaks, actual and would-be, everywhere.

VINDICATOR: GREEN BERET II

It's not today or yesterday that Imagine brought out their conversion of the Konami coin-op smash, *Green Beret*. In fact it's almost two years since CU featured the commando shoot 'em up on its cover. About time for a sequel, eh? Well, that's what Imagine think too—sort of. Y'know, while *Vindicator: Green Beret II* features the same lone hero, the Ocean programmers on the case have developed a completely new set of scenarios, à la *Platoon*, with vertically-scrolling and head-on sections as well as the old horizontally-scrolling sequences. Your hero'll find himself in aircraft, tunnels, crossing railway tracks and bridges, in his quest to find and neutralise an atomic warhead. And the graphics, according to the responsible press persons, are well brilliant.

WINTER EDITION

Think Eddie "The Eagle" Edwards is really a bit of a turkey, huh? And you think you might be able to do a wee bit better than purrfect Katrina Witt on the ice too, do you? Well Epyx are giving you a chance to put your joystick where your mouth is with their latest sports aim, *Games — Winter Edition*. The creators of the Crucial Fall-tapping *California Games* reckon that this one's going to do at least as well. You get to compete in all the best-known Winter Olympic events, including Luge, Speed and Figure Skating, Cross-country and Downhill skiing and, of course, Eddie's speciality, the Ski Jump. And what's more, you won't have to dress up in yucky polyester costume and expose your poor little bod to the elements like the real snow'n'ice crew here to.

RING WARS

Well, we've heard of our solar system coming under attack from aliens and even the occasional meteorite, but never of an invasion of an enormous fleet of other *Worlds!* Still, you learn something new every day, and today we learned that Cascade's forthcoming *Ring Wars* features just this scenario, with hordes of these most unusual nasties threatening the existence of our home group of planets. Your squadron has been scrambled to try and avert this catastrophe. Through this 3-D vector spacecape you've got to roam, taking out the most immovable threats first. But the only long-term solution is to get right into the heart of the incoming mass, and destroy it (but how can a large random group of so-called "ring worlds" have a "heart"? — millions of readers) Oh, just you wait and see...

SAMURAI WARRIOR

Na, it's not "just another Samurai game", for the hero of Firebird's *Samurai Warrior* — The Battles Of Usagi Yojimbo is, in fact, a rabbit. Yes, you heard us correctly, Usagi Yojimbo is possessed of long floppy ears, a small bushy tail — and, of course, a pair of death-dealing blades. Based on the cult comic series, *Samurai Warrior* is set in the troubled world of early seventeenth century Japan. Usagi's pende master, Lord Noriyuki of the gelshe clan, has been abducted by a combined force of ninja and bandits, and Usagi is in hot pursuit. Lord Noriyuki is being brought to the evil Lord Hikiji's castle where he's liable to be subjected to some decidedly non-RSPCA-approved treatment, unless you can save him and vanquish the foe. This, erm, somewhat unusual graphic adventure thingie with bu with y'all this month.

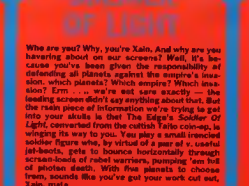

ALIEN SYNDROME

Ughhhh... what are those things??? Better shape up, matey, these big kidney shaped blobs are aliens, and you're wandering around their spaceship, and they don't like it one little bit. The Edge's conversion of the Sega coin-op hit *Alien Syndrome* will be on the shelves in a matter of weeks, and should feature all the stomach-churning action of the original, with swarms of disgusting grunt aliens for you and your mate to die and plenty of special weapons for you to locate, access and use to help you in your task, not to mention the hideous composite master aliens — y'knew, the ones you think you've destroyed when really you've just freed their malevolent head-sections to shaze you about. There are seven levels for you to complete, and you can't afford to get complacent — with the built-in time limit on each level, tarry too long and it's 800000M...

SOLDIER OF LIGHT

Who are you? Why, you're Xain. And why are you hawking about on our screens? Well, it's because you've been given the responsibility of defending all planets against the empire's invasion, which planets? Which empire? Which invasion? Erm... we're not sure exactly — the leading screen didn't say anything about that. But the main piece of information we're trying to get into your skulls is that The Edge's *Soldier Of Light*, converted from the cultish Yato coin-op, is winning its way to you. You play a small ironclad soldier figure who, by virtue of a pair of v. useful jet-boots, gets to bounce horizontally through screen-loads of rebel warriors, pumping 'em full of photon death. With five planets to choose from, sounds like you've got your work cut out, Xain, mate.

REVIEWERS' CHOICE

What's occupying the CU Crew's leisure time? Mike Patterson: *Target Renegade* (64), *Ferrari Formula 1* (Amiga), *Love and Rockets* — Book 3. Gary Farrow: *Barbarian* (Amiga), *Arkanoid* (Amiga), acting the midget. Nick Kelly: *Chelnov* (coin-op), *Arkanoid* (Amiga), snapping guitar strings. Mark Patterson: *Rimrunner* (64), *Bubble Bobble* (Amiga), taking afternoons off.

RTS

READERS COIN-OP CHART

DE LU
13 AFTER BURNER

21 OUT RUN

32 DOUBLE DRAGON

4 RE WEC LE MANS

5 NE PACMANIE

Well, well, well, *Afterburner* blasts its way back to the top, leaving the long-running *Out Run* at number 2. *Sherlock* re-entry by Konami's *Wec Le Mans* and a new entry from one of the current batch of "updates" games, *Pacmania*. Keep these top five comin', people, to Readers Coin-op Chart, Commodore User, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

CHART CHAT

Finally, *Out Run* does what the critics thought it should have done weeks ago and drops from number one, all the way to number five, in fact. Its place has justifiably been taken over by the superb Ocean 'Nam game with a difference, *Platoon*. As predicted last month, the cheapos are once again reasserting themselves. And amongst the new full-pricers, Activision's *Predator* goes straight into the top ten, while Nick Kelly's favourite American footballism, *4th & Inches* makes its first showing at number 13.

No change at the top of the adventure charts, with Mirrorsoft's *Defender* holding firm, but there are two strong new entries in *Bard's Tale* and *Hexler*.

On the Amiga, Melbourne House's newie *Road Wars* goes straight in at number one, displacing its stablemate *Xenon*. Watch the mighty blast of Domark's *Star Wars* use the force on the number one spot.

And next month's tips for the tops? Well, we reckon Amiga owners will be queuing up like kwezy to get their mitts on Palace's *Barbarian*. Adventure nuts may well fall for CRL's latest schlock-horror product, *Wolfman*. And if Firebird's fo, Elite's *Ikari Warriors* and Imagine's *Arkanoïd: Revenge Of Doh* don't show up in next month's 64 charts, we'll set our hats . . . well, maybe, if we can find 'em, then is . . .

Philip Bond '89

▲ Ooh look Mr Pacman! A fairy!

PACLAND

Quicksilver
64/128
Price: £9.95

To say that Namco's *Pac-man* was a rather successful arcade game, would be like saying the Pope is a rather good priest. Yes, four years after it first appeared this is the conversion of one of *Pac-man*'s many spin-offs. The game is set in *Pac-man*'s homeland which as you full well know is named (justifiably if not inventively) *Pacland*. Anyway, for some odd reason *Pac-man* (as we shall now refer to him) has to go right through it, which is not too easy as some of *Pacland*'s natives are not half as friendly as the *Pac* we know and love.

The game is set out into trips. There are four levels to each trip, and each time *Pac* completes a level he is awarded a bonus, which differs depending upon how quickly the level is completed. The game scrolls horizontally and you as *Pac-man*

must dodge all the nasties by walking, running, and jumping. The nasties look like the ghosts in the original *Pac-man* except they are far more advanced, they don't just chase you recklessly on foot, oh no these sods are clever. They run you over in cars, drop things from windows, pound after you on pogo sticks and even planes to get you. And this is only the first few trips, I dread to think what's coming at the end.

As you get further on into the game the ghosts start to realise that they're going to have to do more than simply chase you, so this is where they begin to set traps. Yes, devious is the operative word here. Using your utmost skill, dexterity, and agility (not to mention quite a substantial amount of luck!) you have to guide *Pac* through such perils as row upon row of mammoth

swimming pools, for we all know *Pac* cannot swim and will have to propel himself with enough force off the diving board on each.

There are also great chasms in the ground with only rapidly moving logs as any form of bridge, trying to dodge ghosts while on these is not easy.

So far the adventure doesn't sound an awful lot of fun from *Pac*'s point of view, but if you remember right back to the original game there were these little round yellow pills he could eat that would have the sort of effect spinach has on Popeye. Well, they are back again, a little larger, but they do the job just as well. Eat one and you can

munch the ghosts, and earn a bonus for around ten seconds.

Pac-man can also earn himself little bonuses such as invincibility hats, and magic flying boots around the game.

For once I have found an *Argus* game which is on the right side of average. In fact it's really very good. True, it's not their own but they have done a faithful reproduction of an old but gold arcade game, reproducing the large colourful graphics and the jolly if a little frustrating tune to a tee. Yes, I really must advise you to give this one serious consideration.

**ROLLING
THUNDER**
US Gold
Atari
\$49.95
715-32-0044

about *Rolling Thunder*, and what's the silly dance performed by Maboo's mother before play begins. At least it's funny—which is more than can be said for the game as a whole. I sincerely hope US Gold give us more 720's and Gaunleff's in the near future, as opposed to this kind of thing.

Gary Penn

agent late from the clutches of the Geldra organization controlled by a mad scientist called Maboo. Set scrolling levels inhabited by

Maboo's army stand between you and a confrontation with Maboo. Can you get around Geldra and its atrocities before it's too late? There again, do you want to?

The worst thing about *Rolling Thunder* is that it comes with slipped through US Gold's quality control system. Crude graphics and sound can argue, but surely not

amazing sound is sparse (fortunately, with a few feeble efforts to accompany the gunfire and a jolly tune when the ga'lands finally, there is one good thing

Rolling Thunder *discharge* *March a night's sleep*

"Rolling Thunder" you're doing it

The sight of Shinobi in the arcades may have been enough to remind gamers of its predecessor *Rolling Thunder*, which has just made its appearance in the home market.

By now you will have glanced at the screenshots and seen the ratings, so you don't need me to tell you that *Rolling Thunder* is not the most impressive game ever released. In fact it rates as one of the worst. But, me being where going to tell you all about it.

Converted from the Namco coin-op, *Rolling Thunder* is sort of *Kung-Fu Master* with guns. As you walk through the levels, leaping from the platforms and shooting enemy agents, the screen scrolls. Doorways adorn the scenery and entering one beside a bullet or machine gun symbol tops up your supply of ammunition.

The scenario for what it's worth, casts you as *Rolling Thunder* agent Albatross, on a mission to rescue

conversion could have been considerably better as far as playability is concerned. Not only is *Rolling Thunder* uninteresting to play, it's ludicrously tedious and Mr. Albatross isn't as mighty as his name suggests. The simple act of jumping requires precision timing, and you can't crouch just after firing, which results in the end of your station. And to make matters worse, you have to start from the beginning of each level when you die.

The backgrounds are bland and repetitive, consisting of little more than simple platforms and blocks, and the sound is chunkier than *Pedigree* or *Crash*—and just as well

Gremlin
Price: £9.99
cas
£14.99/disk

You have somehow found yourself in the evil Valley of Gad which is ruled over by a particularly nasty reptilian specimen called Archvult, aided by three allies: Kritos Bloodheart, Ka Rim and The Demivult.

It seems that there's an annual contest in which slaves (that's you) gets to be the hunter quarry. You must make your way through the fourteen or so locations of the valley, fighting off all the nasties that

Choose your earthly form.

the Prince of Vampires, destroy the Undead Warrior Lord Tobias and slay the Demivult. The Thief also has to steal a few items.

Whichever character you choose, you spend most of your time

you plays the hunter, and the other the hunted. At the beginning the hunter gets the opportunity to deploy his three allies at whatever mad locations he thinks you'll visit on your travels. But you can't place

spirit horizontally, with both players continuously nobbling nasties. Whenever the hunted enters a location in which you've placed an ally, you take telephatic control of the ally to do battle with the hunted in the upper screen. If you get nobbled, it's back down to the lower screen and the usual reptilian form. By the way, you have just five days to slay your quarry.

Gremlin have put some nice touches into this game but the whole thing, to my mind, is let down by the indecisive joystick controls for fighting. Since fighting is what you do most of the time, Gremlin might have put in a few more moves. All your team (get it) is large and stab.

The graphics are generally good, but they're a little bit too intimate to be clear, especially on the 64.

Beaming in mind that there are not many two-player games around,

BLOOD VALLEY

are thrown at you, with the aid of the usual set of spells and things. Most of the locations are outdoor but there are a few actual places, like Gap Town, Wizard's Tower and the Monastery.

The storyline may sound pretty raff, but what makes *Blood Valley* a cut above the rest is the fact that it's a one or two player game, with enough contrast between the two to make it all worthwhile.

In one-player mode, you, as the quarry, get to play one of three characters: Priest, Barbarian or Thief, and are set tasks to complete as you fight your way round the Valley. The Priest's only got to defeat Archvult, destroy Malefic

fighting off cohorts of funny blokes, some of whom drop food and treasure when you nobble them. Not being stupid, you pick them up. There are also bags of gold and spells to be had. Spells can be activated at any time, and you can also call up a directory listing all the items you've picked up.

You have to travel through a whole scene before being allowed to go to the next location. When you reach the required transfer spot, you have a choice of directions in which to go. Scrutinising the map supplied with the game should help you decide which direction to take.

Not surprisingly two-player mode is much more fun because one of

them just anywhere, the instructions tell you which locations each character is restricted to.

When you get back, you can choose, as in the one-player game, which of the three victims to be. The same set of tasks still apply for each victim.

In two-player mode, the screen is

this one makes a pretty good stab at fitting the bill. And the game is pretty big, definitely in the midnight oil league. One annoying point is that if either of the two characters gets nobbled, the game is over. So you'd better choose your friends carefully.

Bohdan Buciek

... Wander through that valley ...

... And dress these things.

TARGET RENEGADE

64/128
Imagine
Price:
£8.95/cass,
£12.95/disk

If you're a cynic you're going to have a hard time with this game. I mean there's two reasons for doing a sequel, right? Milk the licence and make loadsmore money. Think again. The good thing about a licence is that it carries a number of associations, but you can't just go using it whenever you like. Ocean went to Tito with an idea for a bona fide sequel and sold them it. And a good idea it is too. Take *Renegade* and put him into a new game with *Double Dragon*-style gameplay. In truth though, last year's *Renegade* wasn't all it might have been, which is why Ocean put Dave Collier on the job. The result, as you might expect from the man responsible for many of their best games like *Arkanoid* and *Green Beret*, is striking. Suddenly the backdrops are filled with large, well-animated characters.

The plot is much the same as the first round of bruising, with the *Renegade* now in pursuit of a gangland boss, a Mr Big who

murdered his brother whilst he was investigating his activities. Your revenge trail takes you through five different locations populated by the kind of people Bronson's Paul Kersey wouldn't spit on.

You begin on the third floor of a deserted multi story car-park. No sooner do you emerge from the lift than a bunch of rampaging Hell's Angels eat on you. One tries to run you down on his bike immediately so you better be ready to kick the oily scumbag off it. To get out of the car park you have to work your way through its four levels, going down in the lift and fighting your way out until you finally emerge on the street in Level Two.

Attackers come at you in pairs or singly, basically because they're so big. Each man is four sprites large and there are weapons in there too. They're all beautifully drawn as well, with great comic touches reminiscent of arcade games styling. The bottom of the screen shows your strength and a large pair of eyes react to the kind of treatment you receive. A good thump in the

gonads turns them bloodshot. And no wonder.

Our vigilante has all the moves he had in his first adventure, but this time you don't have to access them with the space bar. It's nice to know companies do listen to us occasionally. But *Renegade* also has the ability to pick up and use fallen weapons *Double Dragon*-style. You have to disarm an assailant before you get to dish out the treatment yourself but when you have a weapon like the bat or the stick it replaces the punch so you can start wrapping it round a few faces.

Level Two is the sleazy street, populated by pimps (what the packaging euphemistically refers to as a lady's boss). If you sort them out you can make your way along a superb backdrop of shops, all with authentic shading on their windows. Your path soon gets blocked by some, er, ladies, who give you a good hiding if you do the pantomime thing.

The last thing anyone wants to do is make their way through the park at night, but the *Renegade* has no choice, so keep your eyes peeled

Accented by speedheads.

Surrounded by "lady" bunnies

and your bat handy for thuggin' great skinheads. If you don't wake up in a crowd you may make it to the shopping mall where some objectionable Beastie Boy types will slide on backwards and set their dog on you. The dog is quite wonderful. He opens his jaw like a crocodile and takes big chunks out of you.

The final level takes you to the confrontation with Mr. Big in his apt

and sawdust club. To reach him you'll have to get round his fat'n' mean bouncers. Then you can sort out your differences. Oh, by the way, he's huge. Like eleven sprites huge, and it takes more than a couple of tips with your toothpick of a baseball to stop him.

Target Renegade is hugely entertaining and ample justification for a sequel — much more so than *Arkanoiid—Revenge of Doh!* It develops the theme, and improves the gameplay no end on the original

You can't park here, matey

Slapped around outside the chippie.

Target Renegade: another smash hit.

The graphics alone kick Renegade square in the kidneys. This version is great to look at and just as good to play. Dave Collier has done the

business once again — just get him working on something else because gamers are still hungry for software this good

WIN A YAMAHA KEYBOARD!

How would you like to get your hands on an organ (ser, fer)? What's a keyboard got to do with *Renegade*? Well, in his spare time of Ren is keyboardist in a streetwise combo well 'Ard. Actually no made that bit up, but it's no more unlikely than most of the stuff we read on the back of cassette cases. (Who wrote this stuff? Ed.)

Either way it's a great opportunity for you to become the next synth king. Just find a mate, press the buttons, tickle the ivories and you could be the next Pat Sharp Boys, or Swing Out Sister.

With a Yamaha Portatone PSR-12 electronic keyboard you get 32 orchestral sounds including strings, brass, piano and guitar, etc, plus 16 built-in rhythm tracks and fill-in options. Other features include sustain and auto bass chord accompaniment. That's a stunning package.

Don't worry if you don't win first prize because there's 25 runners-up as well. The next Ren out of the CU Random PrizeWinner Lucky3od SelectoComputer via copies of Bonni the Bass' huge Bent the hit and copies of *Target Renegade*. Another 20 win copies of the game alone.

So how do you win? We want you to answer the four music related questions that follow and then tell us what piece of music you would most like to hear on the front of an all action shoot 'em up as a Gehraiser. Answers up a postcard to reach us at Keyboard Compa, Commodore User, 30-32 Farringdon Lane, London EC1R 3AU, by April 18.

1. Which well-known Gordie music programmer has quit Britain for the States?
2. What film soundtrack did the leading music to Combat School resemble?
3. Which company does Juan Michel Jan's write soundtracks for?
4. What is the name of the DJ involved in Bonni the Bass?

A LEGEND IN GAMES SOFTWARE

CARD SHARKS

64/128

Electronic Arts

Price: £9.95/cass

£14.95/disk

There are two forms of disreputable entertainment that just don't work on home computers — fruit machines and cards. The thing that links the two, as many reviewers in the past have incredibly astutely pointed out, is that they're both reliant on winning large sums of money. The one add-on these inventive sprocket chips have yet to devise is a little chute that slots on to the front of your machine which chucks out cash whenever you win something.

This leaves games like *Fruit Machine Simulator* and *Card Sharks* with a problem: how do you retain some interest? *FMS* failed to answer on some other form of reward like a curvaceous slapper stripping off. *Electronic Arts*, not being a grubby

Wot a choice, eh?

mac kind of company have come up with another tack. They set you in front of a group of characters which you actively loath for one reason or another.

Once you've decided what game you're going to play (options include

poker, hearts or chase the lady and pantoony) you can select who you're going to play against. Characters include Maggie Thatcher, Ronnie Reagan, Mickey Gorbachov and a couple of other no marks called Luigi, Milton and Lady. This one

thing they all have in common is that they're crude, silly stereotypes. Maggie is frightfully English and stuck up, which she is, but this really doesn't help. Gorbachov says things like "Russia demands three", when he wants to change cards whilst Milton is an incredibly laid back nunk with a passing resemblance to Woody Allen. He makes insane comments along the lines of "Like wow" and "gosh!" They are all without exception insufferable when they win.

The action itself is confined to the table where the cards are dealt and the games won or lost. The characters all look like who they're supposed to look like but the animation is decidedly dodgy when they pick their cards up. A bizarre elasticated arm snakes out and snaps back into place.

As for the games, they all play fairly straightforwardly, but naturally they all become fairly boring after a while. Another problem is that when you play poker the cards are dealt randomly. Now any fulla kno that you don't shuffle in poker and that's the way you get some decent hands building up. Not in *Card Sharks* — most games are won with a pair or two pairs. Not very exciting.

Despite its attempts to be different *Card Sharks* falls into the same trap as the rest of the gambling games. After a short while it becomes relentlessly dull. With a price tag like *Card Sharks* carries I'm most definitely out.

Mike Pattenden

Ronnie gets gung ho.

BEAT THE SYSTEM ... Now for the crew of FIREFLY there is no home - just a desperate mission to eliminate the mechanoid army which has colonised the solar system.

64/128
Outlaw
Price
£9.99 cass
£12.99 disk

Following fast on the heels of Outlaw's first release — *Shoot 'Em Up Construction Kit* (that's SEUCK to you), comes *Troll*, what you might call the company's first attempt at a 'real' game.

Humgruffin, we are told, is a large and amiable troll who has stumbled into the periwold of Narc, an idyllic land of crystal caves populated by not so amiable goblins. Judging from the poster that comes with the game, Humgruffin is not what you'd call a

The chambers are made up of hexagonal, square, round, and variously-shaped sections placed together to form a honeycomb. This is the game's biggest drawback. It might be OK if you have a monitor, or the latest FST wonder screen on TV, but on mine I could hardly make out enough detail to discover where I was, never mind where I was going. This can be pretty infuriating when you're trying to hop up and down the hexagons because often you can't get where you want to go and it's not obvious why. I found the best solution to this problem was to sit five inches from the screen.

Troll isn't one of those games where you can walk out of one screen and into another, which is why it's full of holes. Humgruffin has holes in his pockets — lots of them. By throwing one of these onto the ground in front of him, he can jump down it and escape to another cave. Holes have a multitude of

Living on the ceiling

question.

There are other ways to get around though. Every now and then a mushroom sprouts out of the floor, if you can get there before it disappears you can bounce up and down on it. This spins the wheel of fortune and sends you (via another hole of course) into yet another cave. Here you will find the same thing as the last one, and your task is again to get the crystal and stick it in the amulet. As well as mushrooms, the odd bit of fruit appears every now and then and is well worth munching as it keeps your energy up.

If you get bored walking around on the cave floor you can head for the 'flip pyramid' which assaults you onto the ceiling. Getting about on the ceiling is tricky to say the least. The temptation is to stand on your head though turning the TV upside down might be a more comfortable option.

I have to say I'm disappointed. After SEUCK I'm sure I wasn't the only one anticipating great things from Outlaw. *Troll* is OK, but that's about as far as it goes. Everything about it is average — graphics, sound, gameplay — the lot. Maybe summer's here already.

Ken McMahon

TROLL

picture of beauty, but what he lacks in good looks he makes up for in intelligence. Being a smart cookie, he realises his only chance of escape is to reverse the spell that got him into this mess. And to do that he must collect the key crystal from each chamber and place it in its amulet.

▼ Hop till you drop.

uses. Humgruffin can throw one into the path of an encroaching goblin and wave bye-bye as it disappears into oblivion. But Humgruffin is not the only one with a hole or two to blow around. Narc's death holes appear from nowhere and swallow up troll and goblin alike.

Apart from coming into contact with a goblin, which no one in their right mind would risk, there is only one other danger Humgruffin has to watch out for. When they're not chasing after you, or falling down the holes, the goblins spend their leisure time building walls. By placing life upon tiles they can make parts of the cave inaccessible, or even walls you are completely in. This happens the only way out is via a hole, assuming you've got somewhere to throw it, that is. Hole jumping seems to be a bit of a haphazard undertaking. Sometimes you end up in a different cave altogether, occasionally you end up somewhere else in the cave, so looking before you leap is out of the

he Bard's Tale, was rereleased by Argosoft in Christmas '86. CU called it "a classic fantasy role playing game with all the magic, mystery, combat and

cunning a mere mortal can devise." It may have been true in 1986, but Electronic Arts has been busy. *The Destiny Knight* is 50 per cent bigger with more monsters, more spells, more caves and dungeons, more of everything in fact, and a few new things as well. But although it's bigger and better than its predecessor, *The Destiny Knight* has almost exactly the same format, so *BT* experts will be able to get stuck in right away.

For those of you unfamiliar with the *Bard's Tale*, let me fill you in on the story. The realm is under constant invasion from lawless hordes of mercenaries from the neighbouring kingdom of Lastado. The reason behind the breakdown in law and order is that Evil Archmage, Lagoth Zanta, has snapped up the

64/128

£9.95 cass/
£14.95 disk

profession. Warriors, paladins and rogues make up your fighting force, monks, conjurers and magicians handle the sorcery. It's also a good idea to take along a Bard, whose songs will strengthen morale in battle and have other magical properties.

Character attributes are displayed at the bottom of the screen: strength, intelligence, constitution,

Order the drink, we'd say!

THE DESTINY KNIGHT

the bard's tale II

Of course before you enter any of these establishments you'll need some spends. You can pick up some gold on the way by engaging some no-goodies in battle. The protocol here is that once the aggressor's intentions are obvious you have the option to stand and fight or, if you're lucky, run away.

Should you decide to stand your ground, decisions must be made as to what each member of the party is going to do. This is where any extra weapons you may have found might come in handy. You can get your conjurers, monks, etc to throw a few spells around, Arc Fire is lethal stuff in the hands of a conjurer. Some of

the more subtle stuff includes Vocal Plating, which causes someone's weapon to take on extra power (over), and the Quick Fix, which restores people to full energy from the brink of death.

As you progress through the game, your players will gain combat experience, much more powerful magic, and of course, lots of gold. There are six cities to visit in all, and plenty of wilderness in between where you can get lost.

The Destiny Knight will keep you occupied for the next eighteen months, who knows what EA will have come up with by then.

Ken McMahon

Are you a man or a mouse?

Destiny wand and hidden its seven pieces.

Your band of inexperienced, but enthusiastic combatants must search the kingdom high and low to discover and reunite the seven pieces of wand. The game begins in *The Adventurer's Guild*—a coffee bar/cafe/inn where adventurers can put their feet up without fear of attack. The first thing you must do is assemble a party. The easy option is to use the pre-built party on the character disc supplied. Really adventurous types can make up their own band of merry men.

The characters are as mixed a bunch as you could for: humans, elves, dwarves, gnomes, hobbits and orcs, with a few half-breeds thrown in for good measure. It's a good idea to pick 'n mix, because different races have different characteristics. Gnomes are good at magic, Elves are nimble, humans are pig-headed. Similarly each member of your party will have a

luck and spell levels. Further info, experience, gold and level can be called up on individual character's screens. All of this text data is accompanied by vivid animated graphics depicting each character in portrait form.

Now it's time to take to the streets of Tangramayne—the capital city. The impressive 3D scrolling screen gives you a forward view down the road with buildings on either side. A quick left or right turn will take you to the door. Travelling around and all other actions are carried out via the keyboard. There are various places worth visiting before making an assault on the dungeon, where you will be asked to rescue a princess. A visit to Garth's Equipment Shoppe will get your team well kitted out. The tavern is a good place for information as well as a drink. Roscoe's Energy Emporium provides energy point pick-me-ups and the casino is a good place to lose all your gold

The Destiny Knight: rule-playing at its best.

MAGNETRON

For a Marble Madness clone, Magnetron gets about as far away as you can from the rolling along ramps formula as is possible. In fact, it's gone for a new improved formula. Not just substituting marble for droid and roll for hover, it's made two innovations: it won't let you fall off, and it's introduced grappling. This to me, is revolutionary thinking of the highest order.

Anyway, Magnetron is as good a game as I've seen this year no matter how much it owes to those who strove before.

The scenario goes something like this. You are in control of a droid, placed on one of eight satellite space stations. Each space station contains four reactors which you must turn off. Your mission is complete when all eight stations are powerless—no to speak. Only when you've turned off all the reactors on a station can you beam to the next one. You'll know when they're all off because all the lights go out. Clever, eh?

To add spice to this imaginatively lethargic storyline, all kinds of things have been introduced, notably grappling guard droids, and various outside screens—more about those later.

You can simply zip guard droids with whatever weapon is allocated to you on that particular station. Or you can grapple with them. Why grapple if you can zap? Because successful grappling replenishes your energy, and even more successful grappling creates a clone of yourself (sometimes known as an extra life).

It works like this. When you

grapple with a droid, the grapple screen appears which features one of those 3 by 3 puzzle squares. Since droids are set to self-destruct whenever they grapple, you must get three bombs (not lemons) on the bottom line of the puzzle to deactivate the droid's detonator, thereby giving yourself more energy. Get the middle and top rows right too, and you create a clone of the droid for your own use.

The only trouble with all this is the time limit, which is about as long as the laugh you get from a Little and Large joke. Needless to say, the droids get tougher as you move to higher stations. But one good point is that you don't seem to get zapped that easily. None of this 'back to the start' stuff here.

That's the grappling finished with

Now for turning off reactors. This works in a similar way, calling up the reactor screen whenever you hover above the appropriate spot. The reactor has four fuel rods which you must play about with until the low-pitched drone goes down and eventually fizzles out. You can also see when the reactor is off because the spark between the two terminals goes out. What you've done, according to the blura, is removed a fuel rod which you then carry around with you ready for the next reactor.

But the fuel rod you're carrying affects your performance. The heavier it is (weight is indicated by the left-side meter) the slower you go up a ramp, its charge, both positive and negative (indicated by the right-side meter) also affects

movement. Parts of the causeways have arrows on them and depending on which way you're charged, you're either pushed in the direction of the arrows or repelled.

Also dotted around are computer screens which you can access to give you droid information and the status of all the reactors on the station.

Only when all the reactors are off, can you go to one of the "beamer" squares to be transported to the next station. There are usually between two and three beamer squares per station and it's wise to make a map as you go to help you find your way back. That won't be too difficult because stations are relatively small, ranging from eight (the first) to sixteen (the last) screens.

Your droid is a pretty slick piece of work. It looks a little like Dusty Bin with a rucksack, and you can see it from four sides. The head hobbles up and down and spins independently from the body, and sometimes you can see a pair of eyes peeping out.

The guard droids are well up to standard. As for the ramps and causeways... well I've seen better, but definitely nothing to complain about. Weapons are pretty imaginative too, irishie-like disks, boomerangs, mortars and a bomb that bounces round corners.

I like Magnetron. It's similar in many ways to the ageing Hawson classic, Paratrooper (written by Steve Turner's statesmate, Andrew Brynbrook), but it contains enough original features to make it enjoyable and absorbing in its own right.

FRIGHT MARE

64/128
Cascade
Price:
£9.99/tape
£14.99/disk

You awake, not in the land of reality, but in the land of dreams. Bad ones. Dreams from which you cannot escape. You are trapped in the realm of *Frightmare*. A realm divided up into four dream zones, each more horrifying than the last. The forest, caverns, torture chambers, and finally, the laboratory.

Although you do not possess the

power to escape from your dreams, you do have the power to create some useful objects in the various dream zones, guns, teleporters, crucifixes, chalice, and more.

The land of *Frightmare* is inhabited by hellish creatures. One story reads that long ago an evil European Prince had the hands cut off any peasants who could not pay their taxes. These hands are now condemned to roam forever the land of *Frightmare*. A race of people who once worshipped the moon became warped and are now condemned to spend eternity trapped between wolf and man. A rich Transylvanian family who made a pact with Satan so as never to be parted from their wealth, have now become part of *Frightmare*, rising from the ground as Zombies. There's a lot of weirdos in *Frightmare*.

To escape from *Frightmare*, you have to advance the clock from

midnight to twelve minutes past eight. You do this by discovering new rooms, each room found adding another six minutes to the clock. Also you must raise the degree of your dream, from Bad Dream through Terrible Fantasy until finally, you reach the state of Nefarious *Frightmare*.

To help you in *Frightmare* you can get your hands on a host of objects of which nearly every one is needed

if you're setting out to complete the game. You get the normal gislot with a generous smattering of bullets around the rooms, but these will not kill every single thing you meet. For the like of zombies, devils and werewolves, you need the silver gun and bullets. These are a lot harder to find but when you do dispose of something that can only be killed by silver it does have a big improvement on your dream rating. Crucifixes will freeze any little problems you might have and holy water is a rather offensive weapon, with a smart bomb effect it destroys any minor spectres on screen.

Frightmare is a large game, short on colour, but with some very nice graphics. The backdrops in several zones are repetitive, but well thought out. For instance, in the lab you have glass spheres with brains sitting in them, and large humans linked up to machines. But my favourite zone is the torture chamber where guillotines and hanging corpses set the tone. The creatures are like most of the backdrops, two colour, which is a shame when you take into account how well animated some are. The wolfmen are great, they start off as

normal humans who hunch over and transform into wolves. Your character is a nice clear size and well animated, but not really up to the standard set by the other sprites.

With the sonics you get the noise of the wind in the background coupled with a few uninspiring spot effects, nothing much there to bother about.

Frightmare is a good game if hard for its type (platform). If you like this sort of thing, check it out.

AVALON

THE KNIGHTS OF THE AVALON

The Chronicles of 'THE KNIGHTS OF THE AVALON' is a fantasy-based Play By Mail game from JADE Games, where players seek to establish, through trade, colonisation, politics, religion and conquest, empires.

For a free start up write to JADE Games with future turn costs from as little as 80p or ring 0705 828271 for an immediate start up.

FREE

NEW ORDER

For centuries your civilization has suspected the existence of intelligent life on other planets. Until now you could do no more than speculate about the mysterious radio signals that your scientists have occasionally intercepted. However with the recent development of the hyperjump engine, conditions have become right to reach out and attempt to create a NEW ORDER to link the stars. Will the dominant species in that NEW ORDER be yours, or that of some alien lifeform? In NEW ORDER you get the chance to find out!

NEW ORDER is a detailed game of space exploration, the rule book costs 3.00 (please don't request to play before reading the rules)

NEW ORDER

Could you survive on Flindar?

The rogue moon Phosphor has almost destroyed life on the planet's surface - causing world wide earthquakes, flooding and volcanic activity

SHATTERED WORLD is an exciting PBM GAME OF SURVIVAL. Startup costs 5.00, with further turns 1.50, includes postage both ways.

STALKERS

Hmm, now where have I seen screen-shots like these before...?

Two-player tactical action, a hundred omni-scrolling dungeon levels, assorted keys, food, magical items, and of course the nasties. ... Instead of ghosts, demons, lobbers and sorcerers, we've got ghosts, dervishes, snappers and mages.

As you (and your partner, if you choose) explore the mazes and vaults of Doomfane in search of the dread Calvrek, there are monster-generating vortexes to destroy with your ever-ready crossbow, doors to unlock, wells to destroy and exits to find.

Though there are no potions, there are 'smart bomb' death scrolls to collect, as well as extra units of strength, armour and magic. There are four mighty artifacts — sword, shield, Ring of Willpower and Staff of Life — hidden in Doomfane, and there are treasure chests full of goodies (a feature of the just-released Gauntlet II).

So what's new? And why should anyone want to buy such an obvious clone of a game released well over a year ago?

Without exactly over-taxing their collective imagination, the programming team of Micro Forté have added some new twists to the formula. All the frantic mayhem has been retained, but there's a strong emphasis on problem solving.

On every level cryptic scrolls can be picked up, mostly containing useful or even essential information about the current level, its dangers and layout. It's usually a good idea to collect these first, and thus avoid eating food which might be poisoned or opening chests containing ghosts.

But some of the scrolls are themselves booby-trapped, and I got carved up on Unlucky 13 when I picked up a Slow Death Curse scroll, giving me only seconds in which to reach the exit. The next scroll cheerfully told me that I'd also selected the longest route.

Sandwiched between certain levels are messages left by the last visitors to Doomfane, and these should be read carefully as you'll be questioned about them before you can progress to the next dungeon. And you'll also be asked a singularly brainy question along the lines of 'what's the magical name for a frothing dusty koale?' I kid you not.

... and build your own dungeons ...

It is now that the curious circular gadget which fell out of the package when you opened it comes in useful. This is the legendary Magical Cypher, the sort of code-breaking device which used to be given away with Eagle and TV21. You rotate the wheels, line up the words, and read the resulting code through a little window. Partly a bit of fun, and also a highly effective anti-piracy device.

But Demon Stalkers' main attraction I've left until last. Included within the program is a

comprehensive dungeon construction set, enabling you to create hundreds of new levels from scratch — right down to colour and

Shoot to kill ...

pattern of the floor tiles.

You can build walls, place objects, choose monsters and set their speed, damage and killing capacities — you can do everything, in fact, that is included in the game itself.

This is all done with smooth, simple and fast pull-down menus and editing windows, and the finished dungeon can then be substituted for one in the game by using a back-up disk (full instructions provide).

As a Gauntlet look-alike with knobs on, Demon Stalkers can't too much to write home about, particularly as the graphics and sound are nothing special. But as a DIY Gauntlet construction set which happens to have a 100-level game as a bonus, it's got to be good value.

AMIGA EXTRA

REVIEWED: FERRARI FORMULA 1

BARBARIAN · BUBBLE BOBBLE

PULL OUT POSTER

ROCKET RANGER

Anyone who's taken to anything, the brilliant hypercamp *Rocket Ranger* shows on breakfast TV of late will just have to take a gander at *Cinemaware's* forthcoming *Rocket Ranger*. One of those interactive movie things, *Rocket Ranger* stars a character best described as 1940's answer to Flash Gordon. The dark shadow of fascism is falling across the world. You get a desperate message from the 21st century — scientists have sent you back a rocket suit, a ray gun and a secret decoder ray, in the hope that you can help the free world defeat the Nazi menace, thereby changing the Nazi-dominated future but to which they find themselves condemned. From then on it's airborne battle with German planes, rescuing kidnapped scientists and bawny beauties, and searching for the elusive Lunatic who'll enable you and your trusty rocket pack to travel the perilous journey through time and space to the final showdown with the evil Reich on the moon! For it is a bird-as-it-plane freaks and foibles everywhere.

AMIGA FUTURE S

SENTINEL

If ever a game was screaming "convert me, convert me," it's Firebird's *Sentinel*. Released to superb reviews at the end of 1988, the chess-like game of skill and strategy had players bawling the midnight oil, attempting to reclaim the 10,000 words swallowed up by the press hungry being they knew only as the *Sentinel* by redistributing energy to intimate objects find rocks and trees. You'll get your chance to knock the *Sentinel* off its perch after Easter.

PINK PANTHER

Star of screen, stage and T-shirt, the film's *Pink Panther* is due to stalk across the screens of your Amiga very shortly. Due for release by Magic Bytes/Gremlin, *Pink Panther* will find our favorite feline engaged as a slightly less-than-honest butler to a member of the aristocracy. You get to play the PP himself, and your task is, need we say, to hold everything that isn't nailed down from your master's mansion under cover of night. And who do you imagine is stealing the place trying to make your life more difficult? That's right, it's Inspector "Does your dog like?" Clauson himself. And to add to the merriment your master has a tendency towards nocturnal perambulation sleepwalking, you ignorant and has taken to strolling about after dark with his eyes shut. You've got to outwit Clauson, avoid raising your shamblering boss, and steal as many as many valuables as you can. Simple, really.

LAST NINJA

System 3's 64 arcade adventure now arrives almost everywhere last year, and rightly so. We reckon it has the best graphics ever to appear on the machine. Now Amiga owners can get to grips with the evil Kunitaki themselves with System 3's first 16-bit conversion. Improvements include multiple warriors on screen, which will save you'll need to fight more than one warrior at a time, and a timer which will help players gauge their progress and improving skills at the game. Listen out for some wonderful sound and some great effects like the flowing rivers. We'll be bringing you a review of this one sometime in early summer...

SHOCK PREVIEW

STARGLIDER II

Jayton, the new anonymous hero of programmer Jez San is back with a sequel to the game that launched state-of-the-art shoot 'em ups on the Amiga. Blast-hungry jets will even be able to get mucky once again with blood in 3D pools and smoggy sounds. Armed with a new spacecraft you head into the solar system to free it from the grip of the Egron Empire, you rumbustious young lark you. On your travels you discover weird beings that look like packrats and whales. Well it could happen and it will...

F-18 INTERCEPTOR

For those who crave wild flight time, Electronic Arts are about to release the quite superb-looking F-18 Interceptor. Take charge of an F-18 Interceptor (that's the USAF's latest) and attempt to complete a series of testing missions, all staged in and around San Francisco's Bay Area. You can try your hand at booting off the flanks who want to shoot down Airforce-1 while it's attempting to land the president safely at San Francisco's airport. Or perhaps you'd like to try preventing World War III by taking out approaching cruise missiles. You can also try rescuing a ditched pilot, carry out an aircraft identification mission or even volunteer for a top secret advanced-pilot-only task. Yup, the sky's the limit with F-18 Interceptor.

NEWS

JOLLY GOOD COMPILATION

Beau Jolly have announced the release of one of the first compilations for the Amiga. Retailing at £29.95, this four game package is drawn from the back catalogues of Activision and Psygnosis.

From Psygnosis come *Ratticus* and *Deep Space*, while Activision contribute *Hacker II* and pet person package *Little Computer People*. This compilation should be in your local softshop any second now.

RAINBIRD'S NAME GAMES

Word reaches us of an intriguingly named product in the pipeline from Rainbird. *EPT* is what's known as a "working title", which means that the finished product may carry a different title. Or in this case, we'd say, will almost definitely carry a different title. The official meaning of the acronym *EPT*, according to a Rainbird spokesperson, is a quaint reference to a well-known American medical product for Early Pregnancy Testing. This, it seems fair to say, might be a wee bit dodgy as a name for a 3-D vector graphic shoot 'em up. But, even more scandalously, some dastardly types have been

whispering in our ears that the three letters actually stand for *Elite Piss Take*.

Needless to say, this latter explanation has been strenuously denied by Firebird. But what with the fact that the said *EPT* does bear a more than passing resemblance to sister company Firebird's *Elite*, well, we're not sure what to think. But we have heard that, whatever's behind it, a weird "working title", *EPT* is an absolutely white-hot blast 'em up. We understand that the final product will soon be with us, on the Amiga — but you'll just have to watch this space to find out the name!

16-BIT BUDGET

Telecomsoft have just announced that several of their most popular budget titles, including *I-Ball* and *Thru*, are currently being converted for the Amiga. These titles will retail for just £9.95 a shot, and will be released on Telecomsoft's

newly-relaunched budget label, Silverbird. And, according to a spokesperson, we can expect to be seeing lots more of these 16-bit bargains from Silverbird over the coming months. Mmmm — good!

LAYING DOWN A BEAT

Home musicians, bedroom reppers and noise merchants who own Amigas will be happy to hear of two drum machines just on the market for their micros called *Adrum* and *The Drum Studio*.

The Drum Studio is a German programmed package from Robtek which allows you to enter the build drum patterns around twenty different digitised sounds. These are stored in two banks, accessed by the control and shift keys, and implemented by the function keys. These can be changed by altering pitch and volume. For those of you who cannot conceive of

writing anything at less than 120 bpm there's an option to speed up and slow down.

The second package is British produced and comes from newcomers Bulldog Productions. *Adrum* contains 26 different sounds including a hysterical laugh and wonderfully disgusting belch. These are all accessed from the QWERTY keys.

Adrum's biggest plus is that it can be linked up with a Midi interface to a drum machine or synthesiser. Whichever one you choose it'll only set you back £39.95, which is a lot less than your average real live drum machine.

Rolling along the
celestial highway.

STARWAYS

With all the Amigas and STs we're told exist in Germany you'd expect a plethora of quality releases from programmers who have had some time to perfect and advance their techniques on 16 bit machines. Not so.

For every good game you see there are another half a dozen which are totally derivative and uninspired. *Starways* definitely falls into the latter category, being to all intent

and purposes a complete rip-off of Gremlin's *Trailblazer* and *Cosmic Causeway* series.

I'd say one thing for the Germans though — they don't bother trying to hide it. *Starways* comes to you with screenshots and an almost apologetic bit of blurb on the packaging. The basic implication is 'here's a *Trailblazer* clone, you know how to play it so get on with it'.

A typically nice bit of loading

screen: and sampled music follow your booting the disk but the game is a flat and uninspired version of the original which I must admit didn't grab me like it did others when it appeared. The implications seem to be that *Starways*, who are credited on the loading screen, are a demo crew. It shows.

The basics of the game are clear. You have a fat baby figure who ploughs up the screen and has to make it through the various zones within a time limit. Holes and tiles help and hinder you by causing you to fall through or jump over gaps. Put simply you have seven jumps and 99 seconds to complete each level.

After three levels I found myself wondering where the other elements were, so I consulted the pack again. No hints. So I carried on but soon found my interest waning. The road is long and sorry and there's little comfort to be had by way of new features. The jumps are the same, the colours the same, the game the same.

If Diamond were happy to do a clone they should have at least tarted it up a bit. 16-bit versions of old 8-bit games just won't do when they're hacked over like this. Not any more.

Mike Pattenden

Some racing for survival

ENLIGHTENED

Firebird
Price:
£19.99

Grab the spell.

Enlightenment, on the Firebird Gold range, is the sequel to last year's pretty successful Gauntlet-clone *Druid*, which has never appeared on the Amiga.

What it really amounts to is more of the same with a fair amount of shooting the undead hordes with electronic bolts, a need for careful exploration of the terrain, control over your 'elementals' who will help you on your quest, and a real hefty whack of spell-casting. Mostly, these game elements occur simultaneously.

The plot runs as follows: you are Hasinax, a druid, who in the game of the same name, expelled Acamantor from the lands of Belorn.

Now, 103 years later, Acamantor is back, and out for revenge. He's turned all your fellow Belornians into undead, and only you can seek out his domain and vanquish him forever, expulsion being too good for him this time round. And quite right too.

Your travels in search of Acamantor take you over the ten lands of Belorn, and eventually into Acamantor's five-level dungeon. There are distinct types of terrain within the lands, some screens look like English gardens, others semi-desert, others marshy. You need to take the terrain into account when conjuring your elementals.

The elementals each represent

Druids hate water

one of the four elements, earth, wind, fire and water, and can be incarnated if you have the relevant spell. They help you fight Acamantor's demons and the undead — though to a limited extent, since you can only control them by telling them to wait, follow you or go in a certain direction. Also, Phoenix the fire elemental is pretty useless in wet or marshy areas, while the Kroken (water) doesn't like the desert much.

They have another purpose, however, in that a second player can take control of the elemental, turn-

ENLIGHTENMENT

marshes have their own creepy-crawlies to be dealt with. The movement and scrolling is smooth; until you move into a different type of terrain, that is.

The graphics are excellent: clear and colourful and well-defined. The music, which comprises a 'signature tune' and background tunes, is also superb and adds enormously to the atmosphere of the game — and there's some wonderfully evocative speech on the introductory screen.

Enlightenment is a big game — which I suppose is a euphemistic way of saying I don't think I've got very far in it yet, and with all those various objectives to keep in mind (shooting bolts, finding and casting

spells, controlling elements), trying to find Acemont's hideout) you need to keep your wits about you. A relaxed blast or puzzle romp this certainly isn't.

Christina Erskine

ing Enlightenment into a co-operative two-player game.

Then there are no less than 28 other spells to find, take and cast at opportune moments. Your spellbook can only hold eight spells at any one time, so some juggling around may be necessary to make sure you have the ones you want.

The game is presented from a bird's eye view, and is done very well. You can actually see your character as a whole person, while retaining the perspective, rather than a circle which is meant to represent the top of his head as in so many 'top-down' games. The undead materialise from out of the ground at every turn, while the daisies and

ocean

GRYZOR

PLATOON

RASTAN

What if we told you we'd deliver Commodore User right to your door, every month, for a whole year. You'd be surprised wouldn't you?

Suppose we gave you an absolutely FREE game as well, then you'd be ecstatic, right? Well, we will!

Some of the more cynical among you will be wondering what the catch is. There isn't one. Simply send us £17.99 (if you live in the U.K.) to get your favourite monthly diet of red-hot reviews, snatch previews, top games and so much more that's packed into every issue of CU.

And don't forget to let us know which one of these recent smash releases from Ocean, that you're going to go for.

Take up our offer and you could be blasting a path through Gryzor; exploring the many levels of Firefly; hacking your way through countless beasts in Rastan Saga; or stalking the many paths and tunnels that make Platoon such a tough challenge.

Just cut out the coupon below and send it back to us right now. Then you can look forward to your great FREE game, and a mind-blowing copy of your favourite Commodore games mag every month. You'll never have to get out of bed again.

BATTLESIPS

Elite
Price: £19.99

polished version of a game you could buy for a couple of quid except it's going to cost you closer to five in this format. Take my advice, buy the cheapo when it appears and put the rest towards a 64 emulator

Mike Pettenden

This is the game, many of you may remember, which Elite programmed for the 64, advertised, sent out for review and subsequently withdrew because "it wasn't up to scratch". That, you may also remember, was after I said it was jolly good fun and much better than playing on scraps of paper. Aren't I the complete pillock?

Not really. The 64 version has subsequently appeared on a one of Elite's many compilations and they have budget plans for it. If it appears for a couple of quid take my advice and snap it up, because it's a bargain. It's neat, unfussy and absorbing and what's more the 16 bit version doesn't differ a great deal from it.

I mean there's not a tremendous lot you can do with a game like Battleships, it's so simple that you risk going over the top trying to tart it up and turn into a Carrier Command or something.

The gameplay, for anyone who

hasn't seen the original or sat around on a wet Sunday afternoon and played it on a bit of their maths book, is simple. Construct a large grid, as big as you like as long as you can produce decent coordinates from it, and put down a set of shapes constructed from squares. To fire at each other you simply call out the coordinates. This the 64 version did managed vary adequately. So how does the 16 bit version merit appearing on the shelves when the 8 bit version was deemed not good enough?

Well, arm, it's quicker, and it's got speech. The computer lays down its salvo in no time at all and a BBC World Service Voice says "Fire 12 shots at enemy" in a deadpan voice. All of which doesn't amount to a great deal.

The graphics really aren't of that much consequence anyway, but the Amiga has an animated screen where the cannons fire a salvo of shells. In this version the guns fire very realistically but, oh no, the ships don't sink, they get a bit flattened and then they just disappear.

So what we have is a slightly more

Good, clean fun.

WARS

Take a listen to this and see if it sounds familiar. An evil emperor holds sway over a distant galaxy far away. He lives in fear of rebellion so he builds a huge battlestation with awesome firepower.

Meanwhile a young farmer, Luke Skywalker, discovers his destiny, rescues a princess, meets a spice pirate and joins the rebellion. This isn't cinematic history.

In this Amiga version of *Star Wars* — the game, your fighter is equipped with eight shields and four lasers, with which you have to fend off the entire empire's elite fighter squadron. This is the first stage. The battle takes place some distance from the battle station itself with the enemy fighters swooping in at all angles blasting fireballs at your lone craft. Under your shield status it does in fact say shoot fireballs but this is only to protect your shields, it's the fighters you want.

The vector graphics on this section are pretty neat, especially Darth Vader's own customised fighter which really does look good as it weaves around the screen. Vader's fighter is the only craft you cannot destroy on this level. If you hit it, it spins out of control for a short while before reconnecting and coming at you again. The only thing lacking on this stage from the arcade version is the great noise the enemy fighters make as they scream past your ship. The laser blasts are different, sounding more like the digitised machine gun fire from *Operation Wolf* than the old fashioned zap effects.

The second stage involves flying over the surface of the station blowing hell out of everything. You get this section on level two and above, but on level two you only get laser bunkers as opposed to the laser towers which figure on level three and above. At the start of this level you are told how many towers to destroy for a fifty-thousand point bonus, plus a running total throughout the level on how many points the next tower is worth.

The last stage is the trench section. Along the sides are laser gun emplacements, who, as soon as you reach the same altitude as them open up on you with fireballs. On level two and above you get cat walks spanning the trenches which have to be avoided. On level seven

Select an attack level

the catwalks sometimes take up the whole width of the trench with only a small negotiable gap near the middle. At the end of the trench is the exhaust port, you know when you've reached it because the voice of freebooter Han Solo blurts out, "You're all clear kid, let's blow this thing and get home." So sign up on the port and let rip with a barrage of laser fire. A direct hit will result in your torpedoes being launched and your craft flying away from the station just in time to see it erupt. If you miss you collide with the force shield at the end of the trench, lose a shield and have to repeat the stage again.

When the level is completed you get your score tacked up and are given an extra shield along with the voice of Han Solo this time saying "Great shot. That was one in a million kid." And so to the next level.

Star Wars is an accurate conversion in most respects, the speech is there, but rather than being digitised from the arcade version it sounds as though it was

lifted straight from the film with the incidental music still hovering in the background. It's also unintentionally camp as an awestruck voice exclaims when you fly over the battleship "Look at the size of that thing!" The graphics are as smooth as might be expected but not always fast. In the stage where you fly over the surface of the battle station the whole game slows down to about half speed. Apart from that I have no other complaints.

It might sound as though game appeal might be limited with only three stages, but *Star Wars* plays well enough to overcome this hurdle.

Mark Patterson

Great shot! One in a million kid...

Price: £24.95

I had to level one criticism at most of the conversions I play, particularly those from 8-bit

could make its mind up about whether it wants to be a realistic war simulation, or a simplified shoot-'em up. Unfortunately it can't.

To be fair to the game, it does have a good (ish) side. The different scenarios you can take on range from the mundane — find one submarine, to the ridiculous — rescue a pilot and defeat the whole

Damage control says... Ally systems are present!

machines, it is that, apart from superficial changes to the graphics, the programmers have made no attempt to really adapt the game for the Amiga. One such example of this is *Destroyer*, in which you take on the role of a battleship commander based somewhere in the Pacific, sometime during World War II (nothing like a bit of generalisation, eh?).

To add to the realism of the game, you appear to be the only man on the ship, so you must man all thirteen different outposts yourself. In effect this means navigating, checking the radar and sonar, and billing the enemy. Now this would all be very well and good if the game

enemy fleet and air force. But even the most complicated mission requires extreme patience before anything exciting happens (if indeed it ever does). What makes the game even more annoying is that the graphics are not even good enough to allow a first time player to distinguish the enemy fleet from a group of islands.

The graphics are average, but by no means outstanding. The actual drawings lack detail, and the animation is, to put it very mildly, pretty poor. The sound isn't any better. The most dramatic moment sonically is when the guns go off, but even that is hardly likely to wake even the lightest sleeper, let alone

Some of the more mind-blowing graphics in *Destroyer*.

AMIGA

Enemy ship ahoy! Or is it an island?

: DESTROYER :

put the fear of god into the enemy.

Overall, *Destroyer* looks like, plays like, and sounds like a Commodore 64 game. Unfortunately at £24.95 on the Amiga it is priced very differently. When you look at some of the games available for the

Amiga, the time must have come when software houses stop looking at converting their 8-bit catalogue to the Amiga, and instead start to develop games that use the Amiga's bewildering array of facilities.

Amiga Firebird Price: £19.95

Bub and Bob are two perfectly ordinary little Brontosaurus who, like most dinosaurs, have girlfriends. That was until they were kidnapped. Not standing for this, Bub and Bob set out to rescue their beloveds from the clutches of the evil fiend.

In order to rescue their women

Love this game

BUBBLE BOBBLE

Bub and Bob have to make their way through a hundred varied caverns until at last they come upon the ruddy kidnapper. Both the little 'Thunder Beasts' can fend off attacks with the exceptional ability to blow high powered bubbles. If timed right the bubble will form around the target creature imprisoning it for a short time. To dispose of the creature(s) once and for all one of the Brontosaurus has to pop the bubble which will send the nasty spinning over until it finally comes to rest and turns into a bonus-giving piece of fruit. In keeping with the follow-on made in the arcade version you get eight credits to follow on with — though when you use one of the credits the computer doesn't let you know.

You are attacked by some very weird things to say the least. Some are nothing more than standard ghosts, while others dressed in white coats make large boulders and roll them at you. Then on later levels you get creatures rather reminiscent of Zeebees from The Magic Roundabout.

Bubble Bobble is absolutely jam packed with special features and little touches. For instance, collecting a potion will fill the top half of the screen with flowers or musical notes, the object being to collect as many as possible before the time expires. Doing this can give you a rather hefty bonus. If both players make it to level twenty without losing a life they are entitled to enter the diamond room, a fabulous room littered with gems

Bub and Bob get tricky.

which all add up to hundreds of thousands of points

Collecting a cross can cause one of two things to happen, a blue cross will flood the cavern causing everything nasty to die, while an orange cross starts a lightning bolt sweeping across the screen killing all known baddies dead. An umbrella transports you to later levels and a bomb will 'smart' all the enemies. And that's just a selection.

Apart from the collectable objects

there are the burstable ones. Bubbles float up from the ground containing lightning bolts, fireballs, water or letters. Bursting a lightning bubble sends a bolt flying out in one direction which will terminate all the creatures it hits. The fire bubbles when popped drop a little lump of flame to the ground which can cause a raging inferno. The water bubbles create a torrent of rushing water which sweeps away all in its path (including you). The letter bubbles

Not the top notch conversion it might have been.

appear randomly with the different letters — when all six are collected to spell the word **EXTEND** you get an extra life.

Of all the arcade conversions ever to be made on the Amiga I thought Bubble Bobble would be the best. For probably the first time in my life I was wrong. Bubble Bobble is a good conversion, but it stumbles in a few places. The two player mode is there and all the features, but the sound effects are only average. The tune is just a touch off the arcade original, and that touch just gives it a quality that starts to grate on the ear drums after a while. The graphics are almost exactly the same but when the going gets tough the screen gets busy, and when the screen gets busy the game slows down (slap on the back of the hand, Firebird).

In the arcade when you get as the letters to extend your life, a little guy appears on a separate screen with some large bubbles which he proceeds to burst. On the Amiga version you also get the screen but the brontosaurus remain immobile, and you have to wait a short while for the screen to boot. Also missing is the way the little figure of player two (or whoever is dead) comes on with a sign saying insert coin or press fire whenever there is one player.

BB is a competent conversion of a highly enjoyable arcade game and, apart from the aforementioned irritants, a very accurate one. An extremely playable game which will appeal to a variety of ages.

Mark Patterson

FERRARI FORMULA

No name is more famous in the world of classic sports cars than Ferrari. The Italian constructors have produced a line of cars unparalleled in speed, design and handling and nowhere is this better exemplified than in the frontiers of motor racing, Formula 1. This simulation gives you the opportunity to test, adapt, drive and compete for the laurels of the Formula 1 Championship in the car that has won more Grand Prix than that of any other constructor.

That sounds like a helluva lot to squeeze into a game but in true EA style they've succeeded to a great extent. FFI allows you to do all the things described above and more, like adapt the car in a wind tunnel,

that the engine under laboratory conditions, work on it in the pits and in the garage at the test track in Fiorano, practice, qualify, warm up and race. What's best about it though, is that it allows you to get as involved as much or as little as you want. You don't have to spend hours working your way through a season painfully qualifying, practising and resetting the car's specifications if you don't want to. You can, as I found myself doing eventually, just compete in the various grand prix.

The game comes with a typically huge and detailed guide book to playing the game and this tells you all you need to know. It even tells you how to get at the wheel of your car. What it doesn't tell you is

**I Amiga
Electronic
Price:
£24.95**

clearly is how to go straight into a race which, let's face it, everyone's going to want to do. Follow the Murray Pattenway and you'll be on the starting grid in no time.

Firstly stop laughing at the pathetic title screen music—it isn't indicative of the quality of the rest of the game. Let the game run through to the Fiorano test track and select race by going to the race control tower. This takes you back to the loading screen but also puts up a panel with a pointer. Move the pointer to Practice and click it on the mouse sign through to Race. It's also worth adjusting the distance. It's normally set on 18 kilometres which is a mere three or four laps of most circuits. There again most grand prix races are closer to 300 kilometres. If you went through it doing every stage as you should by my reckoning it would take a day to complete one race.

What's it like to race? Well once you're in the driver's seat it's not bad at all. The view you get is fairly accurately of the driver's own with the steering wheel and cockpit before you. If anything it's a bit high. The cockpit itself is full of the usual instruments but they're fairly difficult to read and most are only of use at more advanced levels where

▲ This is the pits, man!

you have to do the gear changes for yourself. Everything else is controlled via the mouse, including steering, braking and accelerating. And once you're moving round the tracks it feels pretty good.

Graphically, FFI is inconsistent. The still screens of detailed areas like the pits and the garage are excellent, whilst the more distant ones of the paddock and the test track are merely average. Out on the track the courses are varied and surprisingly detailed. Monaco for example is clearly on the coast, even if it doesn't have that 'attract' feel to it. All tracks are painstakingly accurate. Imola, for example, has the acute Tosa bend where Nelson Piquet spun off last year at two hundred miles an hour. The car and those of your opponents leave a little more to be desired however. Whilst the rear view through your mirrors is effective the other cars lack detail and suffer from the trap most racing games fall into—perspective. From a short distance away they look absolutely huge. Also the results of a crash, like Test Drive, are disappointing—no bills

▲ Another day, another circuit.

▲ Ready to compete.

of flame or plumes of smoke. Don't programmers realize we're all a bit sick?

Sound is perhaps the game's biggest disappointment. There are a few good effects like the whizz of the pneumatic spanners but had EA gone and sampled some engine noises it would really have given the game an authentic feel.

Nevertheless FF1 has more than any other racing game. The only thing that comes close is *Revolvers* and this is a lot more fun and a lot less

hassle to play. With the Brazilian grand prix already over, I reckon all you boy and girl racers are going to get into it in a big way.

Mike Pattenden

WHAT TO LOOK OUT FOR THIS SEASON

Verstappen turned down so that turbo cars and normally aspirated ones stand a chance of being closer.

Riccardo Patrese: second driver at Williams.

Williams cars no longer powered by Honda engines.

Nelson Piquet now driving for Camel Lotus.

Ferrari likely to continue their revival.

Suzuki and Fabi in challenge strongly in Benetton-Ford.

The tunnel of wile (phnarr, phnarr — Ed).

Ahead of the pack (well, nearly...)

Oops, you'll have to be more careful!

Tweak that engine

STRIKE FORCE

Which films like Top Gun continually publicizing American fighters such as the F-14 Tomcat, and the F-16, I for one had almost forgotten that in the Harrier, the Brits have one of the world's best all-round fighter planes and the only one capable of vertical take-off and landing.

Strike Force Harrier puts the player in control of a Harrier, although the one in this game apparently has a few tricks up its sleeve that even the RAF have yet to manage to install in theirs!

As the version I reviewed only left the distribution company a matter of minutes before arriving in my groggy little nits, both the instruction book and the key guides were meant for the Atari ST, but after a few minutes scanning I was blasting bogeys at 20,000 feet with the best of them. By the way, while on the subject of the manual, I must say that although it explains most of the games vital areas, it does seem to have a bit of a gap when it comes to using the weaponry, but hopefully that will be included in the finished version.

What Mirrorsoft, or rather the programming team behind SFH, have managed to do that is so essential in this type of game is give the player enough to play with

▲ SFH prepares for a sharp flypast.

immediately so he will want to delve further and discover the true depths of the game. You do not have to read the whole manual simply to spend five minutes hunting and destroying bogies, but if you spend a while with the game, looking at the smallish manual, you can find a

whole lot more than a glorified shoot-'em up.

On the screen of the Amiga, SFH has a variety of on-screen information. The top two-thirds of the screen is a full 'live-action' display of what is going on around you. Below that is the Friend or Foe Tracking Radar, or FORTAC to its mates. This piece of equipment is completely vital if you are to achieve

even relative success. It not only shows you where your base and those of the enemy are, it also serves to warn you as to the direction of on-coming missiles. You may not have a co-pilot in the game, but FORTAC makes up for that (though he's not much fun in the pub after missions!).

Other parts of the screen act as an attack radar (more information on

WINDER SIDE

Amiga
Mastertronic
Price: £9.99

Three quarters of the shoot 'em ups that have been released in the last year, owe a great deal of their ideas to Andrew Braybrook's *Undum*. So does *SideWinder* but the programmers have obviously set out to use the Amiga's full potential. Excellent graphics, at last reaching the standards that the Amiga has been promising for years, a catchy theme tune that owes a great deal to Rob Hubbard, and some of the

Another 'homage to Braybrook's shoot 'em up

smoothest scrolling I have ever seen (especially when you consider the amount going on on-screen).

It is basically a four way scrolling blast (although the horizontal scrolling is limited and really for affect only). As you fly vertically up the screen, you can scroll the scenery about three inches left or right. Progression from wave to

Blast of the month, courtesy M'ronic.

wave, however, is by completing a section vertically.

Once loaded, you are given the choice of five different playing levels, ranging from Beginner right through to Master. If, however, you decide to change level, there is no need to stop playing; you simply press F2 (pause) and reselect a level. This is particularly useful if you start on a simple level and begin to feel a little more adventurous.

To start with, your fighter is equipped with a twin cannon. Although relatively easy, to kill some of the enemy buildings you must hit them ten times. As you progress through the levels, you can, *Nemesis*-like, collect more and more powerful weapons, until eventually you can blast almost anything with a single shot. Unfortunately, these power packs only last 15 seconds.

When playing the game, the

music no longer plays, and instead you hear some of the most impressive explosions ever. Turning the lights down and plugging the Amiga into a stereo while playing *SideWinder* is an experience not to be missed!

If I had to make one criticism, it would be that the game does not have a high score table. But with a two player option, and arcade quality action, it can live without a high score table.

SideWinder is without doubt a bargain. It is better than *Xenon*—which must be slightly embarrassing for Mastertronic as they released both—and it costs less than half the price.

For once I am quite willing to stick my neck out, if you buy one game this month, buy this one. Miss this and you should be condemned to a life of playing play-by-mail games during a postal dispute!

Since *Barbarian* came into the office the m has been filled with grunts, groans, screams, and the sounds of metal against metal and metal against flesh. It's also turned a rather obvious shade of dark blue and the office gearbox is now bursting at the seams (mainly thanks to C&VG's adipose as manager, Gerry Williams). Yes, everyone here at CU has got *Barbarian* fever. If we had a pick of the month, then this

**Amiga

Price: £19.95**

**C.U.
Screen
Star**

BARBARIAN

enhanced conversion of Palace's Commodore 64 classic hack n' chop 'n' beat 'em up would undoubtedly be 'the man for the job'.

What makes *Barbarian* on the Amiga is the excellent use of sampled sounds. 'Prepare to die!' announces the computer, before either one or two players fight it out in a duel to the death. Swords swish, and clash with a healthy 'clang', the combatants grunt and roar in pain and there's a gratifying 'crack' when you successfully execute a head-butt. Leave the joystick alone for a few seconds and the fighter under your control turns to face you, shrugs his shoulders and says, in a somewhat uncharacteristically camp voice, 'C'mon'.

A well-aimed blow to your opponent's neck removes his head, with a spurt of crimson (human) bean juice and an appropriately sickening slicing sound, followed by a stomach-churning squelch as the severed loaf hits the floor. As you raise your sword in triumph, a squat, deformed, green creature hobbles on screen and laughs menacingly at the decapitated warrior's misfortune, before kicking the head off screen and dragging the corpse off to ye local pie shoppe.

All this nail-biting action takes place against one of four attractive backdrops: a forest scene, followed by a valley, then inside Drax's Castle. Who's Drax you may well ask? Well, he's an evil sorcerer who's holding Princess Maria (played by Ms Whittaker) — erm, holding her, um, hostage. So if you don't fancy a little man to man with a friend you can always fight against the increasingly ferocious computer-controlled opponents in

Dr with his head

Swak, slash — EOWW!

an attempt to rescue the comely, buxom wench.

There are sixteen macho moves available, ranging from a kick to straight-forward cuts and slashes, and the well-cruel Web of Death — a dazzling display of swordplay which involves whirling your weapon around in front of you in a very cocky manner. Guaranteed to impress the girls, this one.

Barbarian on the 64 was great; this 16-bit incarnation is even better. It's graphically superior, a lot faster and smoother, and the use of sampled sound effects is a beautifully prepared cake. One of the collection, methinks.

Gangway, boys. I want to give Williams another thrashing.

Gary Parr

Consult your merry men.

Choose your weapons.

64/128 Accolade Price: £14.95 /disk only

Power At Sea puts you in charge of American naval forces. Your task is to capture the four Japanese bases in the Leyte Gulf.

You start the game by selecting the number of fighter and bomber planes allocated to your aircraft carrier, adding the number of troops and amount of fuel for the convoy. You'll find out what the best combinations are during the mission.

The main screen depicts the bridge of the command ship with the back of the commander's head glued to the middle. In front of him sit the four major officers: communications, navigation, damage and weapons operations. Using the joystick you can move the commander's head to focus any one of the four officers to get them to perform a function. If a particular officer needs the commander's attention, you'll hear a peeping sound and the officer's head will turn round.

So the radio man gives messages from HQ, warns of enemy sightings and attacks and tells the commander

POWER

AT SEA

when a destination is reached.

Next man along is navigation, who plots the ship's course on a map of the Gulf. Plotting a course is done by moving a crosshair with your joystick. The trick here is to work out the shortest distance between enemy bases to conserve fuel. Having plotted the course you choose the speed. For long distances you can turn on 'time compression'.

Next man along is the damages

block. Here you get a picture of the ship with damage indicated both graphically and in text. With only 96 hours to complete the mission you can't afford to limp around.

Last is the weapons operations man who controls the planes, guns and landing forces. He also indicates which force is best suited to an action. When you spot an enemy destroyer, you send in the fighter planes to soften it up and then you bomb it. Kamikaze planes get the

kick back treatment from your anti-aircraft guns. When you reach land, your long-range guns pound enemy coastal installations in preparation for the landing of the assault troops. Most of the action takes place as a sequence of pictures, like film stills.

Still, you do get to fly the planes. But what you get is a cut-price flight sim view of your cockpit and only one attempt to bash the destroyer per plane. Same goes for the guns. You can move them up and down, and to side Beach-Head style and fire—that's it. It's all very boring because there's no real feeling of accuracy.

The biggest bummer of all is that you don't get to take part in the final land assault. That is done as a series of pictures too. Little bits of text appear on the screen, "we need reinforcements", and you simply sit back and wait for the result.

If you manage to capture all four bases, or you're too damaged to carry on, you're sent back to base and given a score ranging from commander to mop boy.

Graphics were very good and there is lots of attention to minute detail. Sound is good too, although not overpowering.

Power At Sea is a well thought out and constructed game but it falls down very badly on the action sequences. And since the strategy stuff isn't all that taxing for the brain, it should have been better.

Bohdan Bucsik

And sail into battle.

OH NO!

64/128 Silverbird Price: £1.99

It is the year one million and gold and diamonds are no longer the most precious substances. These days the ideal gift for a girl is an ox. Or as in incredibly dim animal, bovine creatures being even more valuable than loads of money. It's your job to protect a herd of these

animals, since rustling has replaced doing superior vans as the most lucrative form of crime.

The rustlers come in a variety of craft, some of which multiply, others just make a nuisance of themselves. And then there are the cow snatchers. These lower themselves gently over your bovine flock and whisk them off the side of the screen.

Your valiant efforts at playing nanny are aided by your craft, the latest nu-wave herd mobile. Not only is it equipped with forward firing lasers but also a sort of boomerang with a tracking device which is blasted from the back of

Oh no! ... not very oo-ehing

your craft. However, it's not easy to control. To manoeuvre you have to twiddle the joystick to rotate your craft into the right direction, then accelerate by holding the joystick in that position.

Your craft never stops in this

game. A gravitational force pulls from all sides of the playing area roughly a two by two screen grid throwing you about a lot.

The game is split up into nine planets each with ten zones, which gives quite a large playing area, but

TRAIN ROBBERS

64/128 Silverbird Price: £1.99

You're a rootin' tootin' gun totin' desperado named Cactus Pete, down on luck and out of money. But the west is still wild, so what better way to collect a wedge than by holding up the 8.10 to Dodge City. Chase the train, climb on board and run to the bullion wagon. Collect the keys to the safe, avoid the dogs then open the safe. Grab the swag and leg it over the roof and onto the back of your trusty hoss. And ride off into the sunset a richer man. But then

there's the next train...

Three sections to this cheapie. In the first section you start on horse back cantering alongside the railway waiting for the train to chug into view. Which it does with an obliging chuffly noise. Floor the accelerator, put your horse into fifth gear and draw level with the ladder at the side of the first carriage. Jump from your horse onto the ladder while avoiding on coming cacti and climb aboard the carriage.

Now you have to get across the roofs of the carriages and make your

way along to the bullion coach at the end of the train. The only hazards here are mistimed jumps and tunnels. When a tunnel does loom up you have to press fire to duck, then comes an incredibly uninteresting jaunt through total darkness where only your eyes are visible. When you make it to the end

car you have to enter it through the hatch in the roof. This takes you on to section two in which you have to run rings around guard dogs, grab safe keys, open the safe by bumping into it and get out again in one piece. Then all that remains is for you to scamper back along the top of the train onto the getaway horse and spend the rest of your life in relative luxury on a beach in Jamaica.

Get your name up in lights.

Trans-ing your hoss

Oh No! is not so hard that you can't get far. In fact, shortly after mastering the basic control of your ship it becomes fairly easy.

If you found yourself losing more of your herd than you bargained for, never fear. It is easier to look after one or two rather than ten. And if you shoot one of the special aliens it will leave you behind a special package of an extra cow.

Oh No! falls into the class of shoot 'em up but it is a very nippy little game and it merits playing. The scrolling is very nice, a bit like a scaled down *Persuader*. The graphics, though well defined, are below average, but with the scrolling and the action this is hardly

noticeable. The sonics are pretty good with zip zap noises and a very nice jingly title screen ditty.

Oh No! cannot compete with some of the high quality budget titles and releases around on the market at the moment. It just qualifies for the above average category, and in fact started to drag its heels after a while with the same things being repeated over a variety of sometimes garishly coloured backdrops. Not very appealing for the price and a disappointment for what is the first in the Sensible Silver range of games programmed by Chris Yates and Jonathan Hare of Seuck and Wizball fame.

Mark Patterson

Blood on the tracks

Train Robbers gave me a taste of what the old budget titles were like. The graphics are well handled but ill-defined, with the main character and horse looking like pieces from *Lopo's* classic collection. The train moves very fast and looks quite good as well. One of the most effects is when Cactus Pete hits a bridge at fifty miles an hour. He becomes stuck to the arch of the bridge as the train rushes by beneath him, and then in a true cartoon style plummets to his death.

The sound is a combination of bizarre noises coupled with the puff of the train. Nothing special there. I did have a small problem controlling Pete on top of the train, because the bridges come so fast and joystick control is a bit finicky. I found it hard to dismiss *Train Robbers* as a naffo game, but the lack of things to do weigh heavily against it. Really you'd be well advised to put your money towards something more appealing.

Mark Patterson

THE KRYPTON FACTOR

64/128 TV Games Price: £7.95/cass

How the hell do you turn The Krypton Factor into a computer game? I mean, just how do you include such classic rounds as the Minnesota dexterity test? Well obviously TV Games thought the same thing — and then came up with the answer. Easy. They left it out.

There are six rounds and they all load separately — because the game is "too long", to quote the manufacturers.

You begin by selecting a digitised picture of a competitor, such as a guy called Mike who's a bank manager in Sutton. With a face selected you go into the first round of the *KF* which, everybody knows is the Mental Agility. A series of numbers flash up at random and you have to type them back in numerical order. No problems there, except there's a time limit and if you make a mistake typing them, it's tough to beat.

From there it's onto the Observation Round. A still screen appears and a trail of text scrolls across the screen full of obvious details like colours and times. When it's all over you do it again, watching this time for the changes. Entering them correctly, again with a time

limit which is beyond me. Irritating.

The one section that might have been well represented in *KF* is the assault course. We've all seen Combat School so we know it can be done. However TV Games give you a top down view of a figure who just seems to run over a lot of obstacles as if they were drawn on the ground. You're supposed to press a few keys to give you extra strength in arms and leg and extra stamina where its needed. A travesty.

Next we have the Intelligence Round, the one everybody sits back for. I mean how do they do reconstruct those tortuous puzzles? The computer version is much easier, but by the time you've actually fiddled with the keys and put a few squares together it's time's up.

Finally it's General Knowledge and this is represented in the time-honoured home computer fashion of scrolling questions and then the answer. Did you get it right? The computer asks. Of course I did... The *KF* is a waste of time. An idea for a TV game licence that should have been ditched. What next? *Busman's Holiday?*

IKARI WARRIORS

64/128

Elite

Price:

£9.95/cass

£12.95 disk

I was half heartedly expecting a busy, semi-naked blond to burst out of Elite's shiny presentation box, wrap her arms around me and plant a multitude of sensuous smackers on my person before exclaiming 'Appt Fool!' But no such luck. Inside there really was a girl, bearing the words *Ikari Warriors*, and — surprisingly — a really blank.

Yes, after 18 or so months of delays, hype, rumours and the like, Elite have released the long eagerly awaited 64 conversion of SNK's cult coin-op. So welcome to the wait? Well, yes.

Ikari Warriors is basically a glorified version of Capcom's

Comanche, albeit with a more important difference: you can have two players fighting together on-screen at the same time. This has spawned many clones, amongst them two graphically different but otherwise virtually identical sega titles *SNK*, *Vince & Paul* and *Warriors*. Incidentally, *Warriors* is a collaboration of the former two, being played somewhat. Formerly known as *Ikari*, the game was completely delayed and has yet to appear. It looks like it'll be a first of its kind, the first ever SNK conversion to be released on the 64.

With a scenario would have it, crack commandos will find Vince they sound pretty evil — but it's a mission — to rescue General Alexander Bonn, currently in the hands of a band of raucous revolutionaries. This task involves negotiating roughly 75 screens worth of horizontally scrolling landscape, infested with enemy soldiers, helicopters, tanks, gun

emplacements, and even more enemy soldiers.

Bulletproof shields are in short supply, although extra supplies can be discovered along the way, along with special weapons, such as long range fire, laser firing, turbo explosive grenades, and a special bomb which destroys all enemy soldiers on screen. The latter is a little dotted about the map, and the shielded tanks, but all you need to put inside them is a very heavy dose of death to anyone who dares stand in the way. It's good being able to come to a halt — and you can't really be killed, unless you're in a tank. The manual says the tank engine will stop if you don't use it out quick than you're used to.

It must be said, the coin-op was nothing special. Its popularity was more down to, what was at the time, the fairly unique simultaneous two player action, as opposed to any dazzling gamplay elements. I found this conversion just as playable for the same reason, the considerably more difficult especially as you can control your partner, but even so it's an old fashioned shoot 'em up and frolics throughout.

The graphics and sound are unimpressive — more so the former, as the title screen credits four people as being responsible. Apparently it took a year to do them which is a waste, and they been better than it might have pushed this into the 'screen star' category.

CRL

Price:

£1.95/cass

£14.95/disk

Games which feature time travelling warriors are usually nothing more than lame excuses for chucking together a few totally dissimilar and threadbare arcade scenarios, like commando combat followed by jet-pack shoot 'em up. The result is like a compilation of second-rate games which couldn't make it on their own.

CRL's *Time Fighter* is thankfully a cut above the rest, and though it grafts wild west gunfights and subway nugging, medieval archery

▲ Start in prehistoric times with a few rocks

climax, being easily the most derivative of the bunch.

The animated action is, however, often let down by the background graphics. While some of the scenery is reasonably detailed, especially the indian camp and the castle battlements, at other times it's pretty ropey, and the prehistoric and trench sequences are exceptionally dull. Sound effects are limited to belches and farts which don't vary much from level to level, plus the odd special effect (horses, ariana, motorbikes).

It's a shame, too, that the other animated characters are all identical

Time Fighter

and space-age lasers, it does it all with a certain amount of style, and — just about — gets away with it.

This has nothing to do with the preposterous drivel on the back of the package, which does its best to stop you from buying it, and everything to do with some crafty animated and challenging joystick control.

Your character is a diminutive athlete who actually moves like a human being rather than the ill-proportioned, jerky dwarves which inhabit most games software. He runs, leaps and climbs, throws stones and grenades, fires guns and arrows, and even dies with a fluid realism which is remarkable.

His movements and weapons

▲ Graduate to a bow and arrow in the Dark Ages...

alter for each new time period, and that means you have to develop new skills as you progress through the seven levels — another point in the game's favour.

So, in the prehistoric level one, survival comes down to killing stone-age men, pterodactyls and dinosaurs with some well-aimed rocks. But by the time you've got the hang of that, you've reached the middle ages and you have to master the bow and arrow. Not difficult, but not fast either, so you have to allow for the time it takes to draw your

bow before you fire.

In the Wild West you're gunning down indians and bandits, and shinning up totem poles to avoid galloping wild horses, and then you're transported to prohibited Chicago. Things start getting sweaty now, as you dodge a hail of lead and attempt to pick off the gangsters at the windows, sidestepping the occasional police car. And you've still got WWII, the New York subways and in orbital space station to fight your way through — though the last is a bit of an anti-

to your own, only in a different colour. It would have been a darn sight more atmospheric if the hordes of knights, indian soldiers and thugs had bothered to dress up for the party.

Still, these flaws don't detract overmuch, and the game is sufficiently challenging to compensate. For wimps CRL has provided a practice/cheat mode (hit the space bar) which allows you to battle through all seven levels with infinite lives but no score.

Altogether *Time Fighter* is an interesting addition to a well-worn format. Rumour has it that the programming team has subsequently developed a system which doubles the size of the sprites without great memory loss. Perhaps next time they'll also come up with a more original format in which to place them.

Bill Scolding

▲ And you'll soon have a machine gun

TECHNICAL DEVELOPMENTS

COMPUTER/VIDEO SENDER

- ▶ A computer/video sender is a wireless video signal sender which allows you to link your Commodore 64/128 computer without aerial leads
- ▶ The computer can be viewed on any TV in the same room (handy if your 64 is too distant from aerial cable), another room or even on a TV on another floor
- ▶ Comes complete with multi purpose power supply, video sender to 64/128 cable, video sender to video cable and full comprehensive instructions
- ▶ Wide sender can also be used on your video recorder
- ▶ No soldering, special tools or skills required
- ▶ Pays for itself the day you RECEIVE it!

▶▶ **Only £29.99** ◀◀

TAPE HEAD ALIGNER

- ▶ Quick & Easy way to align heads
- ▶ Works on all CBM type cassettes
- ▶ Stops loading problems arising
- ▶ Free screwdriver & tape head cleaner

▶▶ **Only £5.99** ◀◀

UNSTOPPABLE RESET CARTRIDGE

- ▶ Resets EVERY 64 game available
- ▶ Fits into cartridge port
- ▶ No soldering required!
- ▶ Add pokes, cheats etc from 64 mags

▶▶ **Only £4.99** ◀◀

TAPE/TAPE BACKUP BOARDS

- ▶ The ultimate tape duplicator
- ▶ No software needed!
- ▶ Requires access to two CBM type Datasettes
- ▶ 100% successful
- ▶ Very easy to use
- ▶ Backs up EVERY tape game as it loads
- ▶ Best product of it's type available

▶▶ **Only £8.99** ◀◀

5.25/3.5 DISC CLEANING KITS

- ▶ Keeps those 5.25/3.5 disc drives trouble free
- ▶ No user knowledge required to use cleaner
- ▶ 3.5 disc cleaning kits cleans any 3.5 disc drive
- ▶ 5.25 disc cleaning kit cleans any 5.25 drive
- ▶ Comes complete with disc cleaner, solution and full instructions
- ▶ Please specify drive type on order
- ▶ Order now whilst stocks last

▶▶ **Only £4.99** ◀◀

COMPETITION PRO 5000

- ▶ Arcade quality joystick
- ▶ Super sensitive micro switches
- ▶ Dual fire buttons
- ▶ One of the most robust joysticks available
- ▶ RATED 97% in ZZAP 64 Convicted!
- ▶ A highly rated joystick. Get yours while the price is right

▶▶ **Normally £14.95
Only £10.99** ◀◀

AUTOFIRE EXTENDER

- ▶ Gives autofire at the flick of a switch
- ▶ Deluxe version includes variable autofire speed & burst fire option
- ▶ Fits all joysticks
- ▶ Fitted with 3 metre joystick cable
- ▶ Simply plugs into joystick remaining end plugs into computer joystick port
- ▶ Works on 64/128, MSX, Altair VCS & 8 bit Altair ST/Spectrum/Amiga/Amstrad etc.

▶▶ **Normal version Only £5.99 ◀
Deluxe version Only £6.99 ◀**

ALL HARDWARE PRODUCTS

**64/128
Silverbird
Price:
£1.99/cass**

▲ *Thrust through the
lattice-work of pipes.*

I realise this probably amounts to treason but the first time I saw *Thrust* it was running on a BBC. Since then it was deemed good enough to grace the 64 and has now been given yet another lease of life in addition to game reality.

Pathetically simple, nothing to shout about, grainy, yes, no sound that I can remember, and yet totally addictive, compulsive even.

Ubik, renowned headbanger and 64 synth man, has taken *Thrust* and jazzed it up considerably.

Although you may never have seen, or heard of *Thrust*, you'll probably recognise bits of it from other games. The game is based around the classic zero gravity theory of spaceship animation.

▼ *Avoid those rocks...*

programming. Which is to say that your opponent has but one thrust, conveniently situated at the rear of the craft. A blast on the thruster sends you forward, or, or, down, or wherever your nose happens to be pointing at the crucial moment.

Panic sets in when you get around to thinking about stopping. The only way to do this, of course, is to turn yourself around until the thruster is pointing in the opposite direction to that in which you are travelling and apply the appropriate degree of reverse thrust.

Appropriate being the operative word here. Novice pilots will experience the intergalactic equivalent of the L-driver's

nifty thrusting is required to get through the narrower crevices and into the nooks, where you will find some square things.

When you land, or pass over a square thing, the clock starts to count down, and until it reaches zero you have unlimited firepower with which to blast the various nasties. Here, of course, you run into the second dilemma of zero-grav flight. Which is that the best position for shooting at something is inevitably the one which sends you crashing into a rock very fast. Once again, the gut reaction, more often than not, is to turn through 360 degrees and whacken the thruster, so that you hit the wall with twice the force than had you done absolutely

THRUST II

▲ *...and zap those
nasties*

'kangaroo hop'. Veteran pilots will cack their pants in mirth as you head, at near light speed for the left hand side of the screen, only to turn, thrust and 'elastic band' it back where you came from.

Once you get the hang of the basic manoeuvres, you can actually start playing the game. This involves thrusting your way around a cavernous landscape filled with left-over central heating pipes. Some

nothing. Practice, practice.

When you've got to grips with blasting the nasties — worms, revolving stars, squid things, skulls, etc — you can get down to the real business, that being the transportation of orbs to the planet surface using a grappling hook. If leave you to imagine the problems of coping with an orb on a grappling hook in zero gravity.

Each orb brought to the surface is miraculously transformed into a piece of ghetto blaster. When you build the whole thing you can start again from scratch — with a new set of monsters and rotating, bouncing jumping things.

Thrust II is still great fun, and is enhanced enormously by Ubik's music, 'cute' sprites — the ship looks like a cross between a Domestos bottle and a wine cask — and nice touches like the high score table of 'Today's Grooviest Thrusters'.

FREEZE MACHINE

Only £28.95

Chills the rest!

Features...
"Single part
save"
Includes...
"Freeze
Frame Mk V
& Lazer II"

Features include...

- Totally unstoppable Freeze
- Fast save routines
- Ultra efficient file compactor
- Game killer
- Lazer and Turbo Fastloads
- Integral Reset button
- Tape turbo facilities
- 12 second disk Format
- Selective file copier
- Selectaload
- Plus many more!

UPGRADES

MkII, II, III, IIIb	£ 19.95
MkIV	£ 7.95
Lazer	£ 2.00

The most effective backup cartridge on the market? We feel no other "device" can remotely match the speed, power and ease of use of the FREEZE MACHINE. It's speed of operation is the most amazing feature - imagine being able to SAVE & reLOAD your favourite games in as little as 10 seconds and no more than 18. Buy one and see it perform. If you don't agree that it is the most formidable cartridge available, return it within your statutory 28 days for full refund - we are that confident!

Freeze Machine Utility Disc V3.0

Including over 30 routines, this is the latest version of the disk that complements use of the Freeze Machine. Used in conjunction with the cartridge it allows the complete transfer to disk of many programs that load extra parts, eg Gunship, Last Ninja, World Games & Supercycle. A very useful add on to Freeze Machine.

Upgrades: £2.00

ONLY £7.95

Dolphin DOS

Initial Dolphin DOS and prepare to be amazed! LOADS & SAVES less up to 25 times faster, LOADS 202 blocks in less than 5 secs, yet still maintains standard CBM disk format! Compatible with the majority of commercial software, it is now the established standard parallel operating system for the 64/128 using the 1541 disk drive, and includes many extra DOS & BASIC commands, a built in monitor and Centronics printer driver, plus numerous other useful features.

Only £69.95

Disc Director V5.0

Our popular disk backup/utility package features a wide range of powerful programs. The "robbers" provide will backup most all protected software, and includes options for 3 or 6 minute copy and usage of 2nd drive. Utilities include: Menu Maker, Disk Orderly, Disk Rescue, Discmon+, Scratch/Unscratch, Fast Format, Disc to Tape, Selective filecopy, and many more. Also compatible with 128/128D & 1570 drive.

Only £19.95

DOUBLER THE tape backup device

The most effective product of its type, the DOUBLER makes perfect first generation backups of your tape software. Consists of hardware and software, and requires access to two CBM type data recorders. So easy to use - works every time!

CHEAPO ROUND-UP

U.C.M. M.A.D.

Mastertronic's chavvy answer to *Ikaru Warriors* — only considerably worse (makes you wonder what the question was). *U.C.M.* is well presented, with a great title tune, but it plays like a brick. So much for the *Ultimate Combat Mission*.

Funny enough, it features the sprites from *Elite*'s conversion of *Commando*... OK, so maybe it's not so funny. (3)

CHAMPIONSHIP WRESTLING US Gold

Another re-release clamouring for your pocket money is *Epyx*'s successful wrestling beat 'em up. Undoubtedly one of the best of its kind anywhere it offers neat graphics, good animation, large, witty characters and canvas thumping gameplay.

There's eighteen moves crammed in to *CW* and they're all authentic. Get to grips with headlocks, pile drivers and the suplex, then try them on uglier like the pancey Prince Vicious or fearsome red injun sorts like Howling Manlayer.

A must for grapple fans everywhere... (9)

DANE DARE Ricochet

With the sequel sitting proudly on the shelves what better time to re-release its big brother.

Dane Dare was, and still is one of the best conversions of a comic licence. It features nice graphics, characters which do justice to the artwork of the 50's original and, bit of a shacker this, a game. *DD* contained a neat little arcade adventure beneath its comic style capions. You had to rescue Digby and the Prof from the hands of the Mekon in a neat option of ladders and levels type gameplay.

Re-release of the month — no problems... (9)

THE HALL OF THINGS Firebird

This is one of those *Firebird* games where you wish you could go back to the *Invasion* because the graphics and gameplay are better. *Hall of Things* is a conversion of a four-year-old Spectrum game! What can you expect, then? Sampled sound? Parallax scrolling? No. What you get is lots of green boxes and a stick figure that runs around from location to location

If *Hall of Things* can be noted for anything it is that it predates the likes of *Gauntlet* by a couple of years and that should only be of passing interest when you compare it to other *Gauntlet* cheapos on the market. Someone, somewhere's extracting the urine. (2)

BATTLE VALLEY Rack It

Suffering Stars! A group of terrorists have stolen a couple of medium range nuclear missiles and intend to destroy the world! Egadi! Only you can prevent this — with your super sleek fleet of tanks and choppers. Negotiate the hilly terrain at *Battle Valley* in your tank, destroying gun emplacements, missile launchers and enemy outposts. Use your thrifty chopper (once you've got it up) to wipe out air strikes and repair bridges. Wowza! Sounds great — but it ain't so hot. The good graphics and first class presentation barely compensate for the mediocre gameplay in this run-a-the-mill shoot 'em up. Ah well, you can't have everything (6)

SCOUT Mastertronic

Cheap shoot 'em ups are ten a penny these days but a good one and a tough one never goes amiss. That's what you get with *Scout*. Navigate a scout capsule across a hostile planet in search of bits of your spaceship in the basic idea and

plenty of exact hopping and firing is included in what turns out to be a niggly but attractive blast.

The inlay promises eight planets and extra weapons, but best of all there's loads of aliens! Yeah! LOADS OF ALIENS!... (7)

TANJUM Players

Ho hum, a horizontally-scrolling shoot 'em up. A great stummy puh of a horizontally-scrolling shoot 'em up at that. The graphics are dreary, so's the sound — and so's the

gameplay for that matter (Zzz). Wave after (yawn) wave of uninspiring aliens zip across the screen in a predictable and uninteresting manner, until you reach the end of a level where you meet the deadly snakey alien. And he's just as at home to Mr Yawny as the rest of 'em. Try saving your money instead (Eh? — V. Confused Ed.). (1).

STREET MACHINE Power House

This dreadful multi-directional scrolling *Super-Sprint*-style racing game was released over a year ago — and even then it was widely regarded as dated. Now it's been re-released at a budget price — well, forget it. What price is still asking too much. (1)

HERBOTIX Rack It

Remember *Ocean's* *NOMAD*? Well this is similar (ish), only marginally better (which isn't saying much). Trundling around the maze-like corridors of the enemy space base, shooting robots in an attempt to locate six pieces of a particle destroyer and destroy a super computer is tedious. (3)

◀ The Hall of Things

Bangkok basher

I agree with Jonathan Layzell about the quality of your covers, they are really cool, also all your posters and artwork are cool especially the ones by Phillip Bond and Jamie Hewlett. The poster/calendar arcade at the end of the universe was cool (who didn't spot Mike Pattenden — Neal Hudson). Anyway back to the covers, I only get a quick glance at them as after two minutes — RRIP! — the cover has fallen off and my cat has attacked it and it's in shreds, so I'll be the artwork inside the magazine in anything to go by the covers must be good.

Also Hot Shots (February ish) was brilliant, very cool especially Mysic Mike's crystal ball gazing, more of that please. I think also that you rate games completely wrong, how can you give Bangkok Knights nine out of ten for graphics — oops, sorry video, even though I do not have the game I can see from the black and white photos the graphics look very blocky. Did you give it a double game preview?

Andrew Sedgwick
Epsworth,
S. Yorks

The fact that it appeared in black and white counts for nothing. The game scored highly because the graphics were large and well-defined. The fact they were a bit blocky wasn't really a problem. Bangkok Knights was a good attempt at pushing the barriers of the 64 back still further. Glad you like Phillip Bond he did this month's cover.

Crystal ball time

I just thought I would continue the software predictions trend by sending you my calendar for 1991

January Zzap! 64 is relaunched and breaks all previous records by having 36 editor changes in one month. Issue One of Crash appears on The Antiques Roadshow, and for the first time ever, Hugh Scully falls asleep live on TV while examining it. February: Commodore User surpasses themselves by offering the whole of Southern England as a competition prize. Distribution workers strike when they hear that the ACE editorial team plan to

sellotape a "Thunder Blade III" coin-op onto the front cover of every issue.

March: Mike Pattenden sells his life story to The Sun and sales figures double in one day as Mike buys every copy on sale to wallpaper his house with.

April: The German government state they have retrospectively banned every game Microprose plan to release for the next five years. Elite begin market research to find the most famous person in the world to sign them up for a licensing deal.

May: Elite launch "Buddha's Arcade Bonanza". The Acorn Archimedes sales figures begin to pick up very slightly. Someone went into a computer shop in Solihull and bought one.

June: C+VG begins a new feature called "Games Reviews" which takes up half a page. The remainder of the magazine is needed for the Play by Mail section.

July: U.S. Gold begin sending false poison pen letters to Gorbachev in Reagan's name in the hope they can start a nuclear war and then become it. Nick Kelly turns around sharply and everyone within 35 metres is whipped round the ankles.

August: Preparation for the 14th PCW show begins. U.S. Gold rent the whole of Earls Court, and start erasing Stereo Speaker stacks 350 feet high.

September: Day one of the PCW show. The local hospitals are suddenly overcrowded by thousands of people with exploded eardrums.

October: The law lords pass a law which dictates that arcades are not toilets. Arcades begin to smell a bit better.

November: At last the Final Ultra Hyonr Mega Kils arrives 100% unstoppable mk 12 876934 cartridge is released. It fails to stop Paradroid.

December: Elite release the ultimate Christmas compilation which includes every game ever released for the 84 on one tape. The German Government plans to ban the software industry

And now for some messages from the other side...
Nigel: *Gran is sorry she dealt your high score and forgives you for life-giving her to death with the power pack.*
David: *The cash is in the hole of the Golden Joystick.*

(remember the Braxton-Matt gold-bulion robbery?) I was becoming a danger to my own very being until I was able to drain my desires in your lifesaving magazine. Slowly my freak-rate went down until now I am a just above average freak.
Joe Brennan,
Ballymangrove,
Ireland

Well thanks, Joe, for sharing your problem. We hope it will help other sufferers face up to theirs.

Freakoid

Having been prompted by divine inspiration to write this correspondence, you'll be pleased to hear that this is not another uninteresting complaint about your utterly fabulous mag from another self-centred little twerp with more money than brain cells who sits on his arse all day scrutinizing your mag for spelling errors.

What I really wrote to you about (don't be fooled by the classic sense of humour and debonaire literary form) is my own (look at this for a corker, 16 letters) autobiographical sob story (freakies out all). About two years ago I got my 64. It had a strange lure over me from the beginning and pretty soon I was hooked. It grew on me (not literally). I used to play games all night for a couple of nights a week and I had to wear dark glasses during the day to hide my being an addict (Goo! I looked a dick at Christmas). I lived for my computer. My girlfriend noticed the change and left me for the short wimp down the road (so I fed his lips to his ears, but we won't go into that). Things got worse. I became a waking pile of jelly. People began ignoring me, I was in effect a social disease. I was a member of Computer Franks Anonymous and I was also registered in the public records as being a serious danger to wimps and computer-haters everywhere. But nothing worked. I craved more games, more interfaces and databases, more money

Pride

I am writing about your cool mag. Every time I buy it I get hooked on the cool stuff that gets put in, the reviews on fab arcade games like: *Wardner, Double Dragon, Gauntlet and Ather Burner.*

Let's get down to business: I am the proud owner of a Commodore 64 (well it was me dad who bought it I suppose). Anyway, as I was saying I am the proud owner of a Commodore 64 and it works just as well as any Commodore, Cheshire

Have you a funny story about a working 64? Write to Working 64s, The Sun, PO Box 487, Virginia Street, London E1 W9W. There's a £5 for each original, exclusive reply published. (Err, you sure about this Gaz? Ed)

XR35 owners club

Well let me say right at the beginning I'm a Commodore lover. I started with a VIC 20 (R.I.P. Sob Sob) went up to Commodore 64, and now an Amiga. How's that for faithfulness? I have spent many sleepless nights on these

Evolution theory reflected

● *Super Real Darwin* is, in fact, the sequel to Data-East's *Darwin 4078*, which is a rather brilliant blaster that appeared a while ago. NOT anything to do with a so-called "famous" evolution theorist, actually. So there. Maybe if you give *SRD* a chance you'll get into it, know what I mean — my school dinner money used to disappear into 4078 every day when that first surfaced.

As revolr, mon pett pois,
Mike Thomas

So now NK knows. He should have known in the first place, but he's so far down the evolutionary ladder that crustaceans have higher IQs.

Beefy ones

● Is Sean "beefy" Brennan called so because he keeps farting or is he taking lessons of M. P? Now onto CU "Letterspeak" a letter from Simon Kavanagh — I got a letter of the month, so being a greedy git I decided to write in again.

And finally (trumpet fanfare) why did CU bother to do that last screen thingie? Cos all my mates have it too and I can't tell any of them cos they know I didn't beat it and it's so sad

Weasah
Dave B
Waltham
S. Humbs

Sean is just plain beefy. Mainly because he eats too much. As for Final Frontiers, we never thought of that. Aren't we silly?

Berk

● The other day I bought a copy of *Combat School*, only to find it wouldn't work. Angered, I returned the cassette to my local computer shop and exchanged it for another — only to find that it too was faulty. This happened six times, until the shopkeeper offered to help. Imagine my surprise when I realised that I had my joystick in the wrong port all along! I wonder if any of your readers have had a similar experience?

Gaz Smith,
Iford,
Essex

machines and let me say software prices are well justified. Recent examples are *Tetris* (C64). Brilliant music, excellent game, written by the Russians no doubt knowing we are a country of joystick wagglers — get us sitting in front of the tete then they can invade without us knowing (only a joke). And now for the Amiga. I have to travel 15 miles for games and boy is it worth it. I got Garrison on the strength of your review, also I bought XR-35 on just a screen shot from an ad — £9.95 of pure blasting. Well done Amco, keep it up and other software companies don't get greedy with Amiga software. Get good. If Amco can do it, so can you.

Chris Twyman
Westgate-on-Sea

If you reckoned XR-35 was good you'll love *Sidewinder*. As for the Russians invading they're too busy writing a follow-up to *Tetris*. It's called *Glasnost*.

CU Hits

● As well as "Commodore User" I get "Smash Hits". Like "Commodore User" it uses two different addresses. One for offers and some competitions and the other for competitions and letters etc.

As you know the address for blinders and T-shirts etc. is 14 Holkham Road, Orton, Southgate, Peterborough PE2 0UF.

Well the "Smash Hits" address for offers and some competitions is exactly the same. I find this very odd. Please can you explain it to me and put me out of my misery. Thanks
Simon Givan

Both *Smash Hits* and *Commodore User* are owned by the same company, EMAP, hence their circulation and subscription addresses are the same. Moreover, they're in separate buildings in ex-trendy Canaby Street and we're in fab Farringdon.

THAT'S ME!

INTO THE VALLEY

BY KEITH CAMPBELL

WOLFMAN!

CR!
Price: £9.95
£4/128

Following *Dracula* and *Frankenstein*, when you have a reputation, like Rod Pike's, can be so easy task. Whereas his previous adventures were based on the original novels of Bram Stoker and Mary Shelley respectively, this time the storyline is his own. The central character is a werewolf, which, of course, you get to play, but not all the time. For those not in the know, a werewolf is a man by day, but has the nasty habit of turning into a flesh-hungry wolf at night.

As the adventure starts, you have just woken from a heavy sleep, and become distressed to find you're double-distressed and bloody. Strangely, you don't seem to have any clothes. But when you discover that the "cursed" villagers from the last tale found the naked body of a local girl, you begin to put two and two together — and so does the crowd.

Keeping the crowd in your mind isn't the worst job you've got, but it's not easy. There are a number of constraints in the program that force you to play out certain actions, but although it's levelled, the plot isn't a tedious prerequisite for the stark joy of what to perform. And although the vocabulary itself is not much of a problem, the way the words are strung together sometimes is.

Once through this, you are on your way to finding out what makes a werewolf tick, and to learning the terrible

truth about yourself. You journey far, and find it difficult to control your passion for blood. But this you must learn, or the game will end — usually with a gory picture.

Onward you journey, and before long the player changes roles, to become the beautiful maiden Marla, walking along a path one night. Marla discovers a handsome stranger hiding in the shadows. Fascinated, she strikes up a conversation with him, and finds he is tired and hungry, having journeyed far without food. So you must lure him back to her place for the night.

The stranger soon falls asleep in her bed, pants to urinate, and so on, as before. These go on for a while.

Eventually Marla becomes kidnapped by a crowd of evil-wolf hunters, and as Wolfman, once again, you must rescue her. For this you have her sword, and eventually reach a secret infirmary, which holds your salvation.

As in *Dracula* and *Frankenstein*, Rod Pike plays his character with great sympathy, portraying him as a wretched human tortured by a curse of dark nature, unable to help his poor desires when the wolf is in front of him. The plot is very dramatic, and pure bedtime stories.

The few pictures in the adventure are dismissed, and full-screen mode. Added to CR! and do not offer a whole lot of things we have seen before. Like, for example, a dead body on its side, the blood oozing from the mouth, all the scenery composed of small rectangles. The pictures of the game are on the same size with a 15+ certificate.

Yek! Under 100 turn the page.

But they said it would help my complexion.

Keep your eyes peeled on — where's the gore?

the cover rated at 16+. The only difference is in the graphics: in the 15+ version (which I have not seen) you get an animated decapitation scene.

Wolfman was written with a Quill modified by Tim Gilbert to accept four word input, and comes in three parts. As well as being available from stores, Wolfman is to be bundled with *Dracula* and *Frankenstein*, and offered as a trilogy by the Home Computer Club. *Dracula* and *Frankenstein* have had (and still get) a strong following among CR readers. The adventures have more than one blue-eyed, computer-very-favour-

ably with Infocom adventures. In *Wolfman*, Rod Pike's touch is getting rarer. Wolfman is a sure-fire winner. He has done it again — only better!

INTO THE VALLEY

INTRO

This month I'm reviewing some home-grown adventures, available by mail-order only from the home of the author.

Home-grown adventures are mostly written by enthusiasts, typically with the GAC or Quill, and are budget-priced. The games become known to the adventuring world usually through reviews in fanzines, and occasionally through reviews in the big computer games mags.

It is rare for a home-grown adventure to reach the quality of a commercially published game. It is equally rare for one to be as abysmal as the worst of commercial adventures, and *Zen* and *Inspector Phakeet* are two titles that spring readily to mind.

Out of the recent batch that arrived

I discarded three as being too poor to discuss in depth. *The Other Kingdom* by Keith Reay (DL Software) was too shallow, with poor grammar and spelling/typing cropping up in the text. *The Challenger* Minus from the same source, was a sort of shuttle light simulation in adventure format, with the player's test instruction given in the text much of the time.

I also rejected *Heaven Is Hell* by Steven Gaskell (Connect Software) as being too full of the private world of S. Gaskell.

Those games I did select for review both came from the same source — Mandy Rodriguez, an adventure enthusiast of some years standing, using the label Atlas Adventure Software.

Both adventures run on the C-64, and are priced at \$2.99 each on cassette, \$3.99 each on disk. They are available by mail order only from Atlas Adventure Software, 24 Moss Y. Cwm, Llandudno, Gwynedd LL30 1JE.

BARNEY BROWN AND THE CHICAGO CONNECTION

Roger Ratner of NES has sent you a frantic call for help. He needs a top secret file taken to him in Chicago. You, as his co-agent Barney Brown, start off in your bedroom, empty handed. For a spy thriller, there follows a helluva lot of mundane domestic complications to overcome before you can get started into the

plot proper.

You won't remember where you put anything, and the final atmosphere-destroying part of the pre-amble comes when you have to look under the duddon to get the key for your shed, so as to be able to break your puppy back open. All search and examine stuff here, with nary an

inspired punline to be seen.

The adventure is GAC'd, recognizable as such immediately you see the graphics with their typically GAC'd borders, which are scattered about at selected locations. You can also tell when your input is not going to be understood, by the occasionally long pause after hitting RETURN. Unfortunately, that happens quite a lot.

A lot has been said about redundancy in parsers — do you really need to be able to put things in things, and carry out sophisticated but unnecessary actions? Given a bed in a bedroom, is it unreasonable to be able to expect to lie down in it? Or if not to be allowed, to at least be told

you haven't time enough? Not so here! GET INTO BED elicits NO WAY COULD YOU CARRY THAT, whilst pretty nearly every other command to achieve the same end results in THAT IS IMPOSSIBLE.

Likewise the bathroom cabinet. You can take a shave out of it, but there's no way you can put it back in and shut the door. Perhaps it is unfair to expect this degree of sophistication from a home-grown adventure, but it does go to show how we have become used to the realm of the parsers and range of vocabulary in adventures from the like of Infocom and Magnetic Scrolls.

Not a bad game, but very routine. Nothing to get excited about.

BLACK KNIGHT ADVENTURE

Long ago there was a beautiful and happy valley. One day, it was attacked by the evil black knight, and its inhabitants, loyal to the king, were enslaved and imprisoned in the castle dungeons. Only one man managed to take the news to the king. After large horses, sent to find his subjects, have been repelled by the black knight, the king calls upon you, his most trusted knight. He hopes that single-handed, you may have a better chance of entering the valley unseen, and getting into the castle.

That is the background to the adventure. I often find that the background scenario to an adventure has been dreamed up after a game has been completed, to lend it more credibility and to engender some kind of atmosphere lacking in the play itself. This is especially so in the best-of-the-best force-and-free-the-people type plots set in an indeterminate place and time, featuring characters with forgettably fantastic names.

I don't believe this to be the case in *Black Knight*, and in a lot of ways it is a nice adventure to play. The text is nicely written, and quite descriptive. But...! To build up atmosphere it really is necessary to construct situa-

tions that flow naturally from the setting and objectives. Here there are obstacles all right, but they tend to be what I call "domestic" puzzles, which contribute little, if anything, to the story itself.

For example. Can't get past ferocious dog into farm. Solution (fairly obvious to players). Give doggy a bone. Brilliant puzzle find bone. Solution, bone hidden in suitable "homest" location elsewhere in game, found by examining the right object.

When I came to the river, I headed north, across it, and got a sarcastic message asking me if I could walk on water. So far, so good, but swimming seemed a reasonable means of travel, so I tried. "Oh no you don't — that would be too easy!" came the reply. I could swim, why should I not take the easy way out? After all, I was going to have enough trouble up ahead with the Black Knight anyway! What I really want is a very good reason for not being able to swim across.

Once again, the adventure is GAC'd — but the time without graphics. Not a great loss, I would say. Again, not a brilliant adventure, quite competently written (there did seem to be a hint or two in the map perhaps deliberately), which should pass a few hours.

What have *Keyleth*, *Hulk*, and *Robin of Sherwood* in common? It never occurred to me until I read the Valley's first ever letter from Poland!

Krzysztof Straszak of Lodz knows from hard experience that there are all adventures with pressing problems right at the start. So for Krzysztof, and other sufferers, the clue section this month will help to take you right into these games.

Suddenly a couple of Scott Adams adventures make a reappearance, with a *Savage Island* and a couple of *Perse* problems rolling in.

"Who has heard of *The Lost City*, and *Scroll Of Akbar Khan*? I asked a few months back. Well, it takes a long time for CU to reach Australia, but as soon as it got November's issue in mid January, Patrick Meehan was writing to let The Valley know about the games. Two of a series, the adventures have very basic text and graphics, with two-word input. 'Excellent for beginners,' says Patrick. In Australia the games were sold by Mountain Valley Software, who no longer exist. So it looks as if our original correspondent, F. Richardson of Plumstead, is out of luck.

Save Teuspleman wrote from Sabrem to enquire about Adventure Clubs. I can but give a play to the Adventure Club Ltd, which produces a bi-monthly faizine. Membership costs £11.95 per annum, and application forms are available from ACh, 56c Menelik Road, London NW2 3RH, or from me o/o The Valley.

Can anyone help the struggling people who are struggling this month? Stephen Lovell of Rugeley, is trying to find a golden key in Part 1 of *Neverending Story*. "How do you get out of the cavern, and what is the ice pack for?" asks Peter Bums who is playing *Frankenstein*. And who can help the *Gold Of Thieves* dare

problem to Cooz Willemson of Zutphen in the Netherlands?

Whilst your pleas are welcomed in the Valley, please don't ask for the complete solution to an adventure!

ADVENTURE

KNIGHT ORC.

Cast by at the station.

ZORK 3:

The Royal Pumble (P=Push) PE S S SE PS N NE PS PS E NE PW SE NW NE PS SW PE NE PS NW N N N PS SW S SE NE N PW NW PS PS W NW NW PS SE SE NE PW PW SW PW PN PN NW U.

ZORK 1:

To operate the machine, put the coal and screwdriver into the bucket with the torch, and lower it. Put the coal in the machine and close the door. Turn on with the screwdriver.

ZORK 2:

Push the gold machine into the jewel room before operating it.

KEYLETH:

Break the bands to jump off the conveyor, and then go up.

ROBIN OF SHERWOOD:

LEATHER GODDESSES:

Send the burp ahead of you, and transport to it when a has passed the son beam.

KNIGHT:

Swim all the way to the chandelier! Have a drink before burning rope!

CLUES

CAMPBELL'S COMMENT

Here's someone who has a problem getting the answer to his problems. Or has he?

* I'm having trouble with *Leather Goddesses of Phobos*. I have several problems, the main one of which is decoding the message that the dead alien has. I've met all the 'conventional' codes (shifting the alphabet over a letter, reversing the alphabet etc.) and still couldn't solve it. And Hassan, Houston.

Campbell's comment: The clue to decoding the message is in the 3D comic that comes with the game. Don't say you haven't got the packaging, Alf!

* I had been told by a few Commodore User friends that *The Zork Trilogy* was one (or three) of the best adventure games to be bought for the Commodore. Needless to say I bought them, and at first I was getting through them quite easily, no doubt by the knowledge gained on Spectrum adventures. But I soon hit snags and was blocked in all three games. So now it is with great sadness that I go down on bended knee and beg, nay FLEAD with you lot mercy for the sake of my fingernails and hair, for some solutions to my problems.

Francis Flammgun, Motherswell.

Campbell's comment: Nothing like a few problems to get people grumbling, eh? Keep grumbling while I choose some chess on Gosses, and peruse this news from Coos ...

* It is not easy to buy an adventure game in Holland. Mostly I got them from a mail order company in England or Germany. The games are even cheaper buying them abroad. Sometimes the difference is £20 per piece of software.

Last time I bought *Arak* the Tomb without reading a review. It has good graphics and a nice storyline and a few good puzzles, but I finished it in one evening. It wasn't worth spending so much money.

I think the Dutch don't like adventures. Even Dutch adventures are not selling well. Once I tried to play a Dutch one but that turned out to be a

disaster. I am only used to type in English sentences, so the parser was most of the time completely confused. However, it is not always easy to solve a game in a foreign language. That is the reason I often make use of your unique helpline Cooz Willemson, Zutphen, Netherlands.

Campbell's comment: And not all English or American games sell well here, either Coos. But the Dutch, along with the Norwegians, send more letters to The Valley than adventurers of any other nationality, except of course, the British. As for the *Jinxter* review, perhaps apologies are due to our overseas readers whose native language is not English. It really is a wonderful game with a lot of humour and plenty of puzzles. Natusen? Coos — there I go again! TU try again: Do you know what I mean?

CAMPBELL'S GROVEL:

It seems I was wrong! My 'unpredictable source', which, even if prosecuted under the Official Secrets Act I would refuse to reveal, let us down. I take back everything I said about the availability of Infocom games!

Before Infocom got tied up with Activision, making Activision the distributor of Infocom products, a firm called Sobell imported and distributed the games to the trade in the UK. Difficulties arose over the stock-in-hand at Sobell at the time of the Activision takeover, and it was the way that this was dealt with by Sobell that gave rise to rumours about Activision 'dumping' the titles — as a rather inert Rod Cousins explained to me.

Can't get Zork? Not true! If your local dealer is unable to supply, Activision certainly can, through their mail-order service. And there is no 300-orders minimum policy for dealers ordering new products (another rumour that I heard) — 20 or 30 would do nicely, says Rod.

For anyone wishing to mail-order direct from Activision, the address is: Activision (UK) Ltd, Activision House, 23 Pond Street, Hampstead, London NW3 3PN. Telephone: 01-451 1101.

RESCUE

GIVE IT SOME

A computer without a joystick is like — well, a fish without a bicycle. A cheese roll without a generous dollop of pickle (too bloody right — Ed). You know how it is. How can you play all those ace Screen Stars if you haven't got something to play them with? So, for the first time in CU's history, here are some joystick reviews ...

How do you review a joystick you may ask? Quite simple really. Leave it in the hands of the CU staff for a month or so and ask them what they think. An overall rating is provided, taking into consideration the joystick's ergonomics, durability, responsiveness and the like. Basically, all the things one considers when buying a joystick.

A

WIZCARD

Euromax have a fairly extensive range of human to computer interfaces on offer, with something for everyone — from the casual consumer to the connoisseur. At the bottom (cheapest) end of the range there's the Wiscard, a cursor controller similar to those found with the Nintendo and Sega consoles. It's not the most comfortable 'joystick' to use, but it is responsive and hard wearing, and retails for an affordable £3.95 (complete with six-month guarantee) ...

(6)

B

JOYBALL

The Joyball is another Japanese-exported oddity distributed by Euromax in the UK — and though its name may suggest otherwise, it most definitely isn't the sort of aid you might find in an Ann Summers catalogue. Its unusual shape is deceptively ergonomic, although perseverance is the order of the day here as it takes some getting used to. A switch to the right of the controller determines at which of two speeds the rapid fire button functions when depressed — as the hilarious packaging

blurb (literal translation from the Japanese) goes to great lengths to tell you. At £11.95 it represents good VFM ... (7)

C

GEOS MOUSE

If you've ever yearned to play *Arkanoid* with a mouse, check out Euromax's excellent GEOS Mouse and Cheese package. It's a bit pricey at £38.95, but it does come complete with a decent art package (the cheese — cute, eh?) and is compatible with the GEOS software — if windows are what turn you on ... (8)

D,E

THE PROFESSIONAL

For something along more conventional lines, try either the *Elite* or the *Professional*. Both sticks are also available with a rapid fire feature (in the form of an extra fire button on the *Elite* and an auto-fire switch on the *Professional* — priced at £15.95 and £18.95 respectively). For £10.95 the *Elite* performs well enough, although it's not quite in the same league as the excellent *Professional* quite simply one of the best sticks money can buy (£15.95 to you square) ... (7) and (9)

ME STICK....

KEY

- A - WIZARD

- L - PRO EXTRA
- M - PRO 5000 (CLEAR)
- N - ATARI

F

TERMINATOR

Undoubtedly the most novel joystick available — and also one of the most expensive. Retailing for a hefty £19.95, the Terminator is a surprisingly sold piece of equipment, with a quality microswitch mechanism and an unbreakable steel shaft. It's responsive and can take a thorough pounding, however its hand grenade shape was a bone of contention. Half of us found it was a lump of gimmicky crap. But love it or hate it, you'll be hard pushed to get hold of it... Until recently the Terminator was distributed by Robtek, but now this side of things is being

handled by its originators — Supersoft in Denmark. However this isn't anything to do with the UK Supersoft — and they weren't too keen on the Danish company using their name, so this may well cause problems. Keep 'em peeled for the Terminator in the CU smalls... (Z)

G,H

THE SPEEDKING

Konix launched the Speedking over a year ago amidst a plethora of hype, including a story concerning a durability test performed by the joystick-wagging machine which pushed Konix's baby until it broke many thousands of waggles later. However after a few months in the hands of CU staff, two Speedkings have — to all intent and purposes — bitten the dust and are now certainly less responsive than they were. Despite being moulded to fit snugly in the hand (big hands at that), palm-ache is not uncommon after half an hour's intense use — although this is more down to the positioning of the fire button. Still MP rates it and you could do worse for £11.99 or £12.99 with auto-fire... (Z)

I

THE MAGNUM

Great name — pity about the quality of the stick. Mastertronic's one and only didn't last long in the hands of Mad Mike Panenden, who frequently grumbled about its unresponsiveness and resistance to diagonal movements. The Magnum's only saving grace is that it's comfortable to hold... (S)

J

CHEETAH 125 SPECIAL

Unlike its predecessor, the 125

Special isn't just a conventional joystick — with a flick of a switch you suddenly having a rotating shaft and four independent fire buttons to play with, thanks to two leads — one for each ports. According to Cheetah, "all the major software houses are now releasing games to take advantage of this new development". However we've yet to see anything to qualify this statement. It's a nice idea, let down by the quality of the stick, which is reasonably responsive but feels quite fragile — indeed, it didn't last for long after a few weeks of healthy thrashing. For £12.99, the 125 Special represents only average wobble-value for money... (S)

K,L,M

COMPETITION PRO

Dynamics' Competition Pro comes in three slightly different guises... the Pro 5000, with either black or clear case (£14.95 and £15.95 respectively) — a great stick marred only by the use of leaf switches for the fire buttons (they're not quite as durable as microswitches) — and the Pro Extra for £16.49 (basically a clear-case Pro 5000 with auto-fire and slow motion feature — and, more importantly, longer-lasting microswitches for the fire buttons. Hoorah. Quite what use the slow motion is, no-one here is sure. Still, a damn good stick... (S) and (S)

N

ATARI

Along with the relaunch of Atari console and 8-bit machine comes the reappearance of their classic joystick — retailing for only £4.99. While it doesn't use a more modern and durable microswitch mechanism, the Atari joystick is sturdy and reliable. Worth a look at the price. (Z)

HOW TO WIN

BY ANDREW BRAYBROOK

You want hot tips? You got 'em... Once again CU is proud. Proud to present yet more definitive hints on how to get the most out of your favourite games. This month Andrew Braybrook, distinguished author of such classics as *Paradroid* and *Uridium*, provides the apres ski low-down on his latest masterpiece, *Morpheus*. Take it away, Andy...

I think that the way an expert Player approaches *Morpheus* is completely different from the way a novice does. There are lots of useful gadgets to help the beginner to learn how the ship functions, many of which would be replaced by more practical battle systems by an expert. Think of learning to drive, starting in a Land-Rover would be difficult as it has more gears, and is much heavier to drive. It is much better to learn in a Metro, but you wouldn't drive across a ploughed field in it!

The first few games are very likely to be short, but provided a few Morphai are disposed of then some money will be gained. This should be invested in an Inertia Converter. System as soon as one is affordable at the outset of a game. Then the object of the exercise will be to stay out of trouble long enough for it to be built for you. This will take you about two minutes in the Ather.

Staying out of trouble is not too difficult, once you know how. The roaming Morphai run around in packs in open space. Once they have cottoned on to where you are they may pursue you, or run away, or just ignore you. The latter is especially true of the Cuties, meaning 'sharp

and jagged rocks'. Roaming Morphai tend not to exist around the nucleus or charge orbitals, so the thing to do is fly quickly forwards to an orbital, despatching or fleeing from Roamers, then stopping near it, keeping the beacon in range. The beacon is harmless but it helps in locating the exact position of a nearby orbital. The radar is only a medium range tool and is difficult to use at close range, rightly so.

Holding position near an orbital is all very well, but why not extract some charge from it while you're there. Keep close to the orbital while dealing with the Morphai produced from it, many early types are fairly harmless, with the exception of Nix and Erebus. The first Ather only requires one orbital to be sucked dry of charge before the nucleus intelligence shuts it down. At this point the nucleus is the place to be, and a zig-zag course in its general direction will avoid most remaining Roamers. Of course this relies on you knowing its rough location if it is still on the radar screen then this task is easy, if not then a little searching around should be done. Also, listen to the heartbeat of the nucleus in the background, it quick-

ens as you approach it. After a minute or so, the heartbeat stops and the nucleus dies. As it does so it releases bonus Morphai 'M' symbols. These are the most valuable prizes in the Ather and should be destroyed as quickly as possible, before they fade out. This can be done with the main beam, extra weapons, disruptors, or just plain reckless driving.

higher speeds. The ship is naturally difficult to control at first as it is capable of travelling at high speed to cross vast distances but is also capable of very accurate positioning. The two modes should not be confused, delicate manoeuvres are best carried out by gently nudging the joystick — the full-blown wrench-the-joystick-out-of-the-socket action should only be used

What a swish ship! What a crap captain!

Another big ship, ready to launch

Remember that the ship is behaving as a collection of different systems which would go to make up any space combat vehicle. It is flexible in its design, and any system added to the ship will affect its running in some way. The overall design and make-up is up to you. To avoid complex control panels in the game, all of the ship's functions may be read from the systems that are actually present on your customised ship. Indeed some systems are passive display units, merely reporting on the status of other systems.

In the early stages the whole ship can easily be run from the forward station. The rear station will only be used for strategic withdrawals, which is like running away, but with dignity! The ship has a number of in-built latent systems, like the close-maneuvring stabilisers. These bring the ship to a halt if it is drifting slowly, thus allowing accurate lining up for firing the main beam, although they will not work at

SHIELDS

for emergency escapes.

Another latent system is the Shield Matrix. There is one present in each hull, but it requires the addition of a Shield Generator to bring it into operation. It channels shield power from all present Shield Generators to bring into building a protective field. The Shield Display System uses brightness coding to show the output of the shield matrix at any time. A good way to demonstrate this to intermediate players would be to use hull HL2, fitted with Shield Display systems, along with some form of Energy Replenisher. Watch the Shield Display brighten slowly as you demat into the Aether. The matrix is charging up, which it should be allowed to complete before engaging any Morphi. Larger hulls have more powerful matrices and will show up brighter. The Shield Generator Providing the power to the matrix will darken slowly as it is drained like a battery. Getting hit by Morphi or their fiak results in the shield. The Shield Display will darken indicating that it has been hit, and will recover slowly as it takes more power. The Shield Generator may then darken further until it is black, and thus empty.

Further hits on the shield will then continue to be absorbed, the Shield Display will continue to darken but it cannot recover as no power is being supplied. Finally the matrix will be empty also, indicated by the black Shield Display. Hits will now drain the main energy banks and may also knock out on-board systems. These are protected only while power is present in the matrix.

Contrast that situation with a ship set up with a Shield Replenisher on board as well as the Generator and Display. This time the Shield Generator also recovers as it is recharged by the Replenisher at the expense of the main energy banks. Advanced users would probably dispense with the Shield Display System in favour of a second Shield Generator for faster recovery on a larger hull, Energy Replenishers being required also.

I cannot stress strongly enough how important it is to use the instruction manual. As you come across new types of system in the catalogue, look them up in the reference section, find out whether they need other systems or weapons to function, and decide whether they will be of any use. Some systems are useful all the time, others are

only useful with certain others or against certain Morphi strains. A Shield Display Unit is no use at all without at least one Shield Generator, which in turn is of limited use without a Shield Replenisher, which in turn is a liability without an Energy Replenisher. Many ship functions are related and most ultimately draw on the main energy banks, which represent the lifeblood of the ship.

Study also the effect of using multiple systems 'gang'd up' on the hull, e.g. two ECM units will have a greater effect on Undimines than one. Survival to the next level is what it's all about, it's no good having a great plan for next year if you can't even survive until this day!

Weapons units should be studied as well as the systems. These are of limited use in the early stages and are best ignored until you have a good supply of spare cash. Even then the early single shot weapons are clumsy and slow. These are of limited use in the early stages and are best ignored until you have a good supply of spare cash. Even then the early single shot weapons are clumsy and slow. The eight-directional rapid or simultaneous

fire weapons are more useful, but are ultimately hopeless compared to the Disruptor. The weapons you use should always be the latest available, as using obsolete equipment will have very little beneficial effect on the Morphi.

Overall, the best thing to do is experiment with different ship set-ups until you find some which work well. Obviously the set-ups on the smallest hull are limited so much that there is only one really practical set-up once you are playing properly, but it is also possible to evaluate the purpose and suitability of the first eight systems in turn. Good financial management and forward planning are essential elements in making progress. Joystick dexterity and control is also helpful but is not the sole answer. The sonics are also an integral part of the game. So many people dismiss sound as just an embellishment in a game, like the music, but there are 53 individual sound effects in Morpheus, many of which are vital to the successful running of the ship. So turn the sound up and immerse yourself in this interactive experience. See you in Aether 50.

Be careful out there

```

FLYING SHARK (Firebird)

Look, I'm sorry I'm so very, very sorry I'm sorry about the dinosaurs, and I'm even sorer about the two World Wars. I'm even sorer still that you can only enter these POKEs with the aid of a reset switch. So if you don't possess such a device, skip this bit. Maybe some kind soul (or soul even!) will send us a listing in time for next month. What do you think, kind souls?

Well then. Load the game and when asked to reset the tape counter, do so. Stop the tape and reset the 64. Now enter any of the following

```
POKE 12622,252 (RETURN) for unlimited
bombs.
POKE 7166,252:POKE 7169,252 (RETURN)
for unlimited lives.
POKE 2048,162:POKE 2048,0 (RETURN)
POKE 2050,160:SYS 4056 (RETURN) to
restart the game. Press fire and start the
tape
```

UBIK'S MUSIC (Firebird)

Here's a teeny weeny tip for — well, for the halibut. Reset the 64 — having loaded the program. Wow! It's a version of Space Invaders.

X15 ALPHA MISSION (Activision)

Type in this listing. Now deposit one (1) X15 cassette in 'r' tape deck and type RUN (RETURN). Follow the on-screen prompt to load the game with invulnerability and unlimited fuel.

```

PITCH:

then it doesn't matter how much else you hit, you'll still get a poor score and be alone at the top of the Officers' Club with your miserable

Double exposure is quite easily achieved by using two separate exposures. However, the camera is moving. The photograph of the girl looking at the camera, as the camera moves, was overlaid onto a photograph of the same girl from the same angle. The result is one girl and two camera positions. I find this more difficult

Thoughtful and judicious ways to get the most out of the world require not only the ultimate mission in Central Europe. It is a difficult one. In the few days that you will have to spend in the world's history, which will take many years. It is not easy.

At this juncture in the mission and you are presenting a Congressional Medal of Honor, let us let it stand with this and a small earthly one, which will say to the whole world of our values and goals.

Figure 1

Under a number of assumptions we will find that the following are the most likely reasons that you should not consider attending to it:

- You're too busy to devote a significant amount of time to it.

There is much to be learned from the extensive research on the influence of television. The only way to do so, however, is to be vigilant. The digital revolution, however, will make it more difficult to protect. Around the globe, it is important to ensure that the digital revolution does not become a revolution in isolation. It is not just about the digital revolution, but about the digital revolution in the digital revolution.

There are thousands of flowers in bloom here at the moment, colorful flowers — many kinds. There will be cut and dried flowers, too.

BLASTEROIDS

I don't know if there's any connection between the current revival of flares, floppy hats and the Philly Sound and the recent spate of coin-op classic upgrades, but, hell, there's a lot of it about. We've already had *Arkanoid* (derived from *Breakout*), *Pacmania* (*Pacman*) and a whole host of *Space Invaders* clones. So really it was only a matter of time before someone — come on down, *Atari* — decided to do the same for that other '70's fave *Asteroids*.

For those of you too young or unhip to remember *Asteroids* pitted you, in control of a small, line-drawn spaceship, against a host of boulders which floated gently about theinky-black screen. Your craft could move all over the screen using a thrust button — if you wanted to the edge, the "wraparound effect" meant that you'd simply appear on the far side — and you had to control left and right rotate buttons so as to point your spaceship in the direction in which you wished to move or fire.

There were also occasional flying saucers who'd coast across the screen firing at you.

Blasteroids takes the basic game concept and enhances it in a whole series of different ways.

For a start, there's your ship. Where the original offered you no alternative to your rather feeble little wedge-raft, *Blasteroids* allows you to choose from three different shapes of ship: the largest, and slowest-moving, has least firepower but heaviest armour, the next

one down moves reasonably well, is resilient and packs the greatest shooting punch, and the smallest is nippy but weak and easily destroyed. There's a transform button provided which enables you to switch from one shape to another in mid-play.

There are four different difficulty levels, or galaxies, to choose from, ranging from easy to expert, and each galaxy has a number of different sectors which must be completed. If you manage to make your way through the nine sectors that make up the first level you move on to try the next.

And just what is it that you've got to destroy? Well, asteroids, of course, plenty of 'em, and in a far greater variety of characteristics than the original's bog standard lumps of space rock. Some of 'em, red in colour, leave behind a power crystal which helps restore your flagging energy (you've got an energy counter, by the by, rather than instant destructibility, and when it hits the bottom, it's another 30p please, mate, or let the next person be). Other bright blue ones start off small but soon swell up. Once zapped they do not disappear but hang suspended in space for you to bump into and diminish your precious energy with — the earlier you shoot 'em, the smaller their frozen corpses are, and the easier to avoid. Then there are the ordinary-but-never-to-be-underestimated asteroids of the old school, which fragment when blasted and can

cause you plenty of trouble, thanks very much. There are even some nasty asteroids which, by some form of interstellar magnetism, are actually attracted towards you.

Floating in and out of the space quarry are alien ships, most of which take potshots at you. But whereas in *Asteroids* destroying these tiresome aggressors merely brought you honour, glory and bonus points, zapping *Blasteroids'* mechanised nasties can give you the added bulls of hardware to help you in your quest for survival. There are boosters (these increase your thrust speed), crystal magnets (draw the power crystals to you, thereby saving you the bother of having to go and fetch 'em, added firepower, protective shields (very useful — these diminish the effects of collisions or hits), extra energy tanks, cloaking devices (to fool the enemy) and ripsters (remote bombs).

At the end of each level you encounter the horrible, crater encrusted *Mukor*, who, with missiles streaming out of his peripheral orifices and Ming The Merciless type comments ("Prepare to meet your end, puny mortal" etc) from his mouth, resembles nothing so much as an enormous malevolent shot ball. You have to try to blast all the death-spitting craters off his Humpty-Dumpty form before delivering the killer blow. He reappears at the end of each level, miraculously reencarnated with even more craters than before.

Blasteroids' controls are a

Blasteroids — 70% playability, 80% fun.

Mukor takes on the "human slime"

considerable improvement on the original's, apart from fire, thrust and transform buttons, rotation is controlled by a joystick rather than those fiddly buttons.

The graphics are O.K., though perhaps not as startling an improvement as, say, those on *Pacmania*. But with all the playability of the original — and plenty of new variations — *Blasteroids* is well worth a further

ARCADE

CHELNOV

Scheduled Atomic Runner: Data East's latest shoot 'em up sensation finds you guiding an athletic Russian through a fantastical underground network of tunnels which lead, according to the maps fleshed up at the end of each level, to the Statue of Liberty. Whether the ultimate intention is for our hero Chelnov to destroy the West's symbol of freedom or, post-Glasnost, to embrace her isn't clear. You'll just have to finish the game yourselves to find out... good luck!

Chelnov at first glance bears some resemblance to the horizontal phase of the recently converted Gryzor: the action takes place on two planes with the joystick controlling your running onscreen characters' angle of fire as well as forwards and backwards motion. A jump button sends you somersaulting through the air

in where Lance Gyzor is gunned through a rather dull jungle environment scene being shot at by some very dreary—if quite efficiently deadly—robotroops and gun emplacements. Comrade Chelnov is faced with a dazzling array of ground-based and airborne nasties against a lavish undulating subterranean background which features doric columns topped with flame, crumbling bridges over fiery chasms and enormous disembodied arms reaching out of the earth to clutch him. It's a fairly daunting prospect for our hero but there's no turning back or even hesitating. The screen itself scrolls continuously behind you, and you're going to have to face those perils sooner rather than later.

Apart from the shootin' and jumpin' buttons, Chelnov also possesses a turn button which allows you to turn around and fire behind you—this feature,

DATA EAST
(2 × 10p)

Beastly beasts and violent muggles.

Look it all in 'em, comrade.

ARCADE

ADES

continued with the game's relentless left/right scrolling have the effect of allowing Chelnov to run backwards, strating the enemy behind him.

This hero of the Soviet Union starts out with a standard shooter but there are plenty of icons to be picked up by shoving out certain winged beasties, fire sources on tops

of bridges, and so forth. It all gives you a variety of features and weapons to make life in the underworld a little more survivable. Others enhancing your weapon's power and your own ability to jump. There are flame-throwers, fireballs, shock-and-chaos, heat-seeking missiles and fistfuls of boomerangs to name but a few collectable items. And you will certainly need them.

Apart from the hobgoblin figures which rush at you on the ground and the oversize moth creatures which fly above you in clusters, there are giant half-armoured ant creatures, the aforementioned disembodied clutching arms, and occasional gigantic spider monsters who require full minutes of shooting and avoiding if you're to defeat them. You also have to take out certain obstacles before you've scrolled into them, and you can even demolish platforms and ledges along with the nasties on top of them.

The action gets extremely fast and furious and I will take all your sleight of hand to keep yourself facing in the right direction, taking out your opponents, timing your leaps

and avoiding missiles. Your jump control allows you to adjust your point of landing so, assuming your attackers don't unduly put you off, you shouldn't find the various chasms, firepits and broken bridge spans insurmountable.

The soundtrack owes something to Rastan saga, and so, if you're a die-hard, does the feel of the game. But Chelnov's more sophisticated gameplay gives it an edge which the broadsword beat 'em up just doesn't quite possess.

Currently on release in Japan, and on limited site-test here, Chelnov is already proving a most popular product. I had to return several times to my local arcade before I managed to beat the crowds of onlookers and competitors and get on there myself. Expect to see this all over the island by summer.

TWIN COBRA

TITO
3-100

Twin Cobra doesn't take many chances. Vertically-scrolling, aerial shoot 'em up action is what you get here, with most of the details not seventeen trillion miles away from last year's Taito stalwart, *Flying Shark*.

True, *Twin Cobra* features helicopters rather than biplanes and the "twin" aspect of its name refers to the fact that you can fly in tandem with a mate (not possible in *Flying Shark*). Nevertheless, one is left with the more-than-vague sensation of having been here before.

To fill you in, you take off from your aircraft carrier and proceed towards the enemy shore, taking out the bases of choppers who, one for you. Once over land, you've got to deal with ground-to-air missiles and tanks too, plus occasional super choppers. The ground-based

enemies generally need a couple of hits to destroy them, and the super choppers considerably more. These latter opponents dodge about spraying showers of shells at you, but if you manage to pump them with enough lead they eventually disintegrate, leaving behind a moving 'X' on either 'S' or 'B' marked on it. Catch this and your weaponry will be enhanced.

Your weapons are originally two-fold: unlimited heavy machine guns and a very limited number of bombs (these destroy all the enemy craft in your immediate vicinity though not everything on the screen). Each time you manage to pick up an "S" your fire power is enhanced, initially simply doubling but latterly by giving you completely new kinds of cannon. Each time you score a "B" you acquire one more bomb.

There are also small supply huts

bunkers to take out, which leave footprints in their wake for you to collect, but what if anything these give you apart from extra points of course? Couldn't work it out.

Life as a cobra pilot may have much of the same flavour as that of a *Flying Shark* man, but it did seem a wee bit easier. The fact that the tanks and helicopters opposing you aren't camouflaged and therefore don't completely blend in with their backgrounds made survival and thrills a much happier proposition. And, though the on-rater tankship which comes at the end of each level is a huge proportion, I personally didn't find it quite as tough a nut to crack as the five-spriting horrors encountered at *Flying Shark*'s nether regions.

Twin Cobra passes most of the tests in terms of graphics, sound and playability. It's smart, entertaining, and, of course, utterly predictable. If coin-ups were for tits, this would be a *Shock Aiken Waterman* release — slick, user-friendly and pretty much the same as the last one.

Nick Kelly

More fire-power comes in handy.

Crossing with your twin.

Take out the big guy to pick up "extra" points.

256K SUPEROM EXPANDER

- ☐ How you can select each way of 8 256K EPROMs instantly
- ☐ 8 sockets in accept upto a 256K EPROM in each
- ☐ On board operating system - no programme in hand
- ☐ Program your own EPROMs using our EPROM programmer
- ☐ No need to leave back of motherboard - just make a selection from the Superrom menu
- ☐ Directory of utilities on power up
- ☐ Fully menu driven as power up
- ☐ Select way into under software controls
- ☐ Original EPROM programmer features will take your own programme - 16bit or 8/12 and turn 128K to 256K EPROMs (256K/512K burner required)
- ☐ Accepts EPROM 27128, 27128, 27128, 27128
- ☐ On board unprogrammable reset

ONLY £29.99

4 WAY KERNAL BOARD

- ☐ This board fits in place of the kernal in your 64 and accepts a 16K or 32K replacement kernal giving 4 or 4 different operating systems
- ☐ Just flash the resets supplied to select between systems
- ☐ This is a carrier only - ready to accept your own chip
- ☐ How you wish have all your different systems available at one date

ONLY £8.99

5 HW BOARD ONLY £12.99

CLONEMASTER™

- ☐ Makes tape to tape backups
- ☐ Works with even Turbo Loaders etc
- ☐ Requires access to two CDM type data recorders
- ☐ Makes perfect copies
- ☐ Very simple to use
- ☐ LED level indicator

ONLY £9.99 POST FREE

RESET CARTRIDGE

- ☐ One-pushable reset button
- ☐ Resets even on called "unprogrammable" programme
- ☐ Add pinches from magazines etc
- ☐ Fits in cartridge port
- ☐ Simply plug in

ONLY £5.99

DUPLIKATOR™

- ☐ Copies whole disk in one pass - only one drive required
- ☐ Makes backup copies in eight seconds
- ☐ Duplikator is the fastest, most efficient and easiest to use disk copying system ever conceived
- ☐ Copies complete with 256K on-board RAM and its own operating system - no software to load
- ☐ Makes multiple copies from one original
- ☐ Full disk verification during backup process
- ☐ Copies standard software as well as arrives 21:30 and upto 40 tracks
- ☐ Full disk error check in eight seconds
- ☐ Full disk verify against run in fifteen seconds
- ☐ A disk for disks, user groups etc How else can you copy over 250 disks and hour for less than \$100
- ☐ Copies complete with on/off switch and reset button
- ☐ Fixed in minutes - no soldering usually required

ONLY £89.99

16K EPROM BOARD

- ☐ Accepts 16K EPROMs
- ☐ Convertible to 32K or 64K or 128K or off
- ☐ On board unprogrammable reset
- ☐ Full instructions

ONLY £8.99

DISK NOTCHER

- ☐ Quickly and easily notch your disk capacity
- ☐ Use both sides of your disks
- ☐ Simple to use
- ☐ Three seconds

ONLY £4.99

DEEP SCAN BURST NIBBLER™

- ☐ The most powerful disk nibbler available anywhere, at any price
- ☐ Burst Nibbler is actually a two part system - a software package and a parallel cable to connect the 16K/128K/128K to 64, 128 (same type)
- ☐ What gives Burst Nibbler its power? Conventional nibblers have to delete the rest from the disk before it can transfer in using the normal bus - which uses standard data is transferred they are fast Burst Nibbler transfers data as raw 525 words via the parallel cable without the need to delete it as you get a perfect copy of the original
- ☐ Will nibble upto 41 tracks
- ☐ Copy a whole disk in under 5 minutes
- ☐ Full instructions
- ☐ Regular updates - we always ship the latest
- ☐ Fixed in minutes - no soldering usually required
- ☐ Push or 1/4 inch
- ☐ No need to buy parallel cable if you have Disk Doctor, Dolphin etc
- ☐ Cable has thorough extension for other disk sets
- ☐ Whether to choose BurstBack or Burst Nibbler? Burst Back™ is unbeatable value as an 'all rounder' - with nibblers, 1 on 2 drive copy format, file copy 1271 copy etc etc so if you have a more general requirement perhaps BurstBack™ is for you. Burst Nibbler is a pure nibbler meant to run, for the reasons stated if it's just making backups you are interested in, there is no other product to beat it

ONLY £24.99 COMPLETE

SOFTWARE ONLY £12.99 CABLE ONLY £14.99

EPROMMER 64™

- ☐ A big quality on-board EPROM programmer for the 64 128
- ☐ Fully menu driven software/hardware package makes programming/loading/verifying/erasing EPROMs completely easy
- ☐ Will program 2716 2732 2764 27128 and 27256 chips (16, 32, 64 or 45 volts)
- ☐ The two user ports for maximum compatibility with cartridges/Superrom Board etc
- ☐ Full battery system - all functions covered including device blank/verify
- ☐ We believe EPROMMER 64 is the most comprehensive, most friendly and best value for money programmer available for the 64, 128
- ☐ Ideal companion for Superrom Board, Cartridge Development System, our kernal expanders or indeed any EPROM base project
- ☐ Comes complete with instructions - plus the cartridge hardware

ONLY £39.99 COMPLETE

DATTEL ELECTRONICS

3 SLOT MOTHERBOARD

Save wear and tear on your Expansion Port

- ☐ Accepts 3 cartridges
- ☐ On-board safety disk
- ☐ Switch to read any disk
- ☐ Multi grade PCB
- ☐ Fully buffered
- ☐ Reset button

ONLY £16.99

DATA RECORDER

- ☐ Quality Commodore compatible data recorder
- ☐ Power control
- ☐ Suitable for 54, 128
- ☐ On-board
- ☐ Hand now for quick delivery

ONLY £24.99

SMART CART

Now you can have an 8K or 54K cartridge that you program like ROM!

- ☐ 8K or 54K pseudo ROM
- ☐ Battery backed to read up to 5 years (10 years warranty)

Simply load the program you require - then hit the switch. The cartridge can also be removed just like a ROM cartridge.

- ☐ Make your own cartridges including automatic input - without an EPROM burner

- ☐ Can be switched on or off board via software

- ☐ 10 to 8 bit open for special programming techniques

- ☐ 52K version has 4 x 8K pages

- ☐ More knowledge of M, C is helpful - but full education are provided

8K VERSION £14.99
52K VERSION £29.99

SMARTCART UTILITIES

A series of utility programs for use with Smartcart. Simply load in the program and you have a powerful cartridge. When you have a different requirement - load in another program and you have a new cartridge. This prevents false records which are repeated any number of times.

We intend to release a range of programs. The first available are:

DISKMATE II

- ☐ All the features of Diskmate I (see ad)
 - ☐ Loaded in seconds - with full instructions
- ONLY £9.99

PRINTER IV

Now you can turn your MP8 801 into 4 printers in one!

- ☐ Alternative character set ROM - Dated in seconds

- ☐ All save sets have true dependence
- ☐ 100% compatible with all software
- ☐ Improved ROMs
- ☐ Switch to ROMs
- ☐ Switch to ROMs
- ☐ Choose any set at the flip of a switch

"For anyone who uses their printer often this chip is a must. It's quick and easy to use and the end results are impressive!" - Your Commodore, Jan 87

ONLY £19.99

TURBO ROM II

Turbo Rom II is a replacement for the actual kernel inside your 54. K provides superfast load/save routines.

- ☐ Loads most programs at 5-6 clock normal speed
 - ☐ Saves at 5-6 times normal
 - ☐ Improved DOS support including 16 sec. wait
 - ☐ Programmed function keys - load, directory, etc.
 - ☐ Returns to normal kernel at flip of a switch
 - ☐ PCOPY - 800 baud the super
 - ☐ PCOPY - special I/O loader
 - ☐ Has 16 sec. wait
 - ☐ Piped in software - no addressing (causing errors). (Can now 54 a bit ROM may have to be discarded)
- ONLY £14.99

BLAZING PADDLES

A complete lightpen/graphics illustrator package.

- ☐ A fully menu driven graphics package of a nature which extends on much more
- ☐ Complete with a three option lightpen system for pin point accuracy
- ☐ Make feature software including:
 - ☐ Range of brushes
 - ☐ Airbrush
 - ☐ Zooming
 - ☐ Circle
 - ☐ Rubberbanding
 - ☐ Lines
 - ☐ Predefined
 - ☐ Zoom mode
 - ☐ Printer display
 - ☐ Load, save
 - ☐ Advanced colour setting - over 800 levels
 - ☐ On and paste other shapes
 - ☐ Windows
 - ☐ Pictures can be used to form tape disk
- ☐ Blazing Paddles will also work with many other types of devices including: Joysticks, Mouse, Graphics Tablets, Trackball etc.
- ☐ Pictures can be saved from Action Hopping and edited with Blazing Paddles

Complete Blazing Paddles & Lightpen

ONLY £24.99

Blazing Paddles available separately for £12.99

TOOLKIT IV

The ultimate disk toolkit for the 1540/1541

- ☐ A disk toolkit is an absolute must for the serious disk hacker. Toolkit IV has more features than most for the:
- ☐ DISK DOCTOR V2 - Read and write any track and sector including extra and unformatted tracks. Repair damaged sectors. Load contents with read errors
- ☐ MESSAGES V2 EDITOR - Features and displays ALL header information including CFI bytes and header page. Rewrite the entire header and header page. Reconstruct sectors. Also save any sector full page
- ☐ DISK LOOK - Sort directory. Reverse and display ALL header information including CFI bytes and header page. Rewrite the entire header and header page. Reconstruct sectors. Also save any sector full page
- ☐ FILE CONVERTER - Can convert machine programs by up to 30% same disk space. Compressed programs may be normal
- ☐ BINARY DISK COPY - Copy an entire disk to a master or save using single 1541
- ☐ BINARY FILE COPY - Extracts the very best at up to 5 to 10 times normal speed
- ☐ FORMATTER - 10 second format on entire disk or format any individual track or load track 5 to 41. Reduces any of 50 percentages to access an entire single disk format
- ☐ TRACK TEST - Quickly test and compare all read errors including extra and unformatted tracks or sectors and half track from 5 to 41. Then increase data on entire sectors and allows you to redefine any DIRECTORY PAGE

ONLY £9.99

RAM DISK

- ☐ Turn your Smart Cart into a 52K RAM disk
 - ☐ 52K of instant storage area for files/programs
 - ☐ Load, save instantly
 - ☐ Disk type on-board load, save directory
 - ☐ Program disk retained when computer is switched off
 - ☐ Pull command
 - ☐ With instructions
- ONLY £9.99

ROBOTEK 64

- ☐ Robotek 64 is a comprehensive hardware software package which enables you to make your 64, 128 in the outside world
- ☐ 4 input channels - each with onboard relay
- ☐ 4 input channels - each fully buffered TTL level output
- ☐ Analogous input with full 8 bit conversion

DIGITAL SOUND SAMPLER

- ☐ The new sampler allows you to record any sound digitally into memory and then play it back with automatic effects
- ☐ Playback forwards/backwards with auto/reverse/stop acceleration etc.
- ☐ Now with full auto editing module to produce outstanding effects
- ☐ Full 8 bit A to D and A to D conversion
- ☐ MMS compatible with multiple software (16 channels for 54/99 see ad)
- ☐ Live effects matrix includes real time display of waveforms
- ☐ Tape in/tape out/tape out/loaded controls
- ☐ Powerful sequencer with editing features
- ☐ Load, save sample
- ☐ Up to 8 samples in memory at one time
- ☐ Tape or disk (please state)
- ☐ Complete software/hardware package £69.99
- ☐ One Drive software is available separately at £9.99 to turn your Sampler II into a Disk Drive system as well as a sampling system

COM-DRUM

Digital Drum System

- ☐ Now you can turn your computer into a digital drum system
 - ☐ Hardware/software package
 - ☐ 8 digital drum sounds to memory at one time
 - ☐ Complete with 8 drum kit
 - ☐ Real drum sounds - not synthesized
 - ☐ Create superb drum rhythms with real and step drum
 - ☐ Full editing
 - ☐ Manual drums
 - ☐ Output to hi fi or through to speaker
 - ☐ Load/save facilities
- (state tape or disk)
- ONLY £29.99

COM-DRUM EDITOR

- ☐ 34 drum sounds supplied as disk to enable you to construct your own drum kit
- ☐ Re-arrange sounds supplied with a Com-Drum to make new kits
- ☐ With word sampler hardware you can record your own kit
- ☐ Load, save facilities

ONLY £4.99 disk only

Model & Robot Control made easy

- ☐ Video input for video control
 - ☐ Software features: test mode, analogue measurement, video advance, digital record etc
 - ☐ Electronics version
- ONLY £39.99
- including hardware/software/mip etc. (State tape or disk)

TOMMY'S TIPS

Drive switch reply

With reference to your tip headed 'BAD MEMORY' as published in the January issue of *Commodore User*: Marc Loyeau of Witney, Oxon, wrote to you asking about a 'box' or 'connector' that he could fit to his Amiga's second drive that would enable him to switch it in or out of the system.

Our company is in the process of producing various add-ons for the Amiga and the drive switch is one product we are considering. As an Amiga user for over twelve months we have found it almost essential to be able to switch out the second drive and have fitted a switch for this purpose.

There is a lot of software that will not run on a 512k machine with a drive connected. This is not just a problem for 256k Amiga owners (if there are any!) but applies to all Amigas. Some software just does not want a second drive connected.

If Mr Loyeau would like to contact us we will be able to supply him with a subable switched connector. Current advert in your magazine carries our address.
**Mr S. P. Jenkins,
Turbotronics,
Hullfax**

Which of goes to show the power of Tommy's Tips; it brings out the best in our readers including the commercial companies. Well done, Turbotronics and I expect you will get inundated with enquiries.

Beginner

I have a C64 and I am a new boy to this computer lack so please don't take the micky if my questions seem

elementary. I have three questions to ask and I'm sure you will be able to help.

1. Is it possible to increase the memory of a C64?
2. I have a music expansion system, can I play this through a guitar/keyboard amplifier with a standard jack plug input — if so how?
3. The term 'back up' — is this when you load a commercial program onto a blank cassette with the aid of a cartridge — if so, how simple is it to do?

Thanks for any help you are able to give.
**Mike Graves,
Milton Keynes**

First of all, no apologies are necessary; we all had to learn somewhere and that is what Tommy's Tips is all about. I'm sure the following answers will be of interest to more than just yourself!

I'm afraid that, at present anyway, you cannot expand the C64 beyond the in-built 64 Kbytes of RAM, at least not in the sense of having more RAM available at the same time. What is available however, is a battery-backed RAM cartridge from Trilogic, called RAMBOX. There are certain limitations in that it can only be used in conjunction with the Expert utility/copy cartridge, but allows you to hold several programs (depending on size of cassette) in memory at once and call up the one you want (alternatively, developers can work on different versions without changing the original copy). The 64k RAMBOX costs £49.95 and the EXPERT costs £29.99. Contact Trilogic on 0274 691115.

As for music output, this comes from pins 2 (Gnd) and 3 (Audio Out) on the Audio/Video port at the rear of the computer. These will need to be tied into a suitable input socket with the correct impedance (ie. LINE input, not a MIC input) and can then be amplified in the normal way. If you get a lot of noise and a low signal level then the impedance of the input is wrong. Always use a screened cable with the 'Gnd' (Pin 2) connected to the screen.

The term 'back-up' is a general term for the process of taking a safety copy of either a program or data so that if one copy gets corrupted, you can take another back-up from the remaining

one and continue working. When you take a back-up of a program you should always use the copy and keep the original in a safe place. Using something like the Expert cartridge makes backing-up most programs extremely straightforward since it will allow back-ups to be created from both tape and disks onto either type of medium.

Cartridges

Please could you tell me if any disk drive (Commodore compatible) would work with my C128. So far, I've been led into believing that only the 1571 disk drive is C128 compatible, or can the 1541, 1541C or even better the Excelsior I work on it?

Also is it possible to enter monitor in C64 mode on the C128? When I press RUN/STOP + RESET switch I go back into C128 mode when playing a game in C64 mode.

Will back-up cartridges work in C128 mode, and which is the best?

Please could you tell me which one you would recommend, and whether they're worth getting when using tape. Why is it that companies have to keep upgrading them, eg. Freemachines V, Action Replay IV? Is this because they're so rubbish to start with they keep having to upgrade them? If I buy one will it mean

I'll have to upgrade it every two months or so.
**Danien Plesso,
Aberdeen**

There are only two drives which are specifically designed to work with the CBM 128, the 1570, which is a single sided drive and the 1571, which is a double sided drive. Both of these drives will give fast response times when using the 128 (as opposed to 64 mode).

However, you can use any of the standard Commodore drives such as the 1541, 1541C and the Excelsior I, but the penalty with all of these is that you get the same slow speed when using the 128 mode as with the 64 mode. Even using a parallel DOS (disk operating system) will not solve the problem in full because with most of them you have to specify EITHER 64 mode or 128 mode when you order (since only one ROM KERNAL is supplied), so only one mode will be speeded up. Next, you cannot use the 128 monitor to access the 64 memory as the RAM configuration is completely different between the two modes.

If you want to get back into the 64 mode when doing a reset, hold down the C- key at the same time. Finally, most back-up cartridges will only work in 64 mode, not 128 mode. This is because the vast majority of users is for games and there are very few games which have been written to run only in 128 mode (in fact I'm not sure there are any at all).

As to why they have to be constantly upgraded, they are trying to keep up with the software houses who are always trying to find ways to protect their software against these cartridges! It's a bit like military defence, as soon as

side discovers a defence against the exotic weapons, the other side invents a new weapon to overcome the defence, etc, etc.

Loader

● I own a Commodore 64 and have problems loading specific programs, all multi-loaders. Firstly *Last Ninja*; I've had 3 different cassettes of this and none of them load properly. On the second cassette I had I got to Level 5 once but that was it.

I've also had 4 different game cassettes of *Defender of the Crown* (none of them work) and on *Pirates by Microprose* I don't get anything on how I ended my days after I've played the game. All these games would be good games but they don't work. Has anyone else had these problems or am I just extremely unlucky.

I've sent off for 'Load-it', a Datatorder that hopefully helps loading. But could you tell me as I'm a new Commodore 64 owner — is it normal for games not to load like this?

Dorion Oliver, London SE6 P.5. Should I write to the software companies involved and send the games back to them, even though I got them from the shops.

Games, whether multi-part or not, should load nine times out of ten without any problem. Occasionally, a main spike or voltage fluctuation can cause a load failure on a long load, but a filter plug will cure these. If you are having problems with virtually all the programs you try to load, then the chances are that your tape heads need re-aligning. The nine tape deck should solve the problem, although it is possible to buy head alignment kits which allow you to set the recorder up correctly yourself.

If you really suspect a tape may be faulty, particularly when a program won't load on either yours or a friend's machine, then you should always return it in the first instance to the shop where you bought it. Any good dealer will replace it.

Dictionary

● After recently watching the quiz on BBC 1, Mastermind, I would love you to list a program that would be able to work on my Amiga 500. What I want the program to do is when 3 letters are typed into the computer, then the computer would print all the words that start with the first letter and contain the next two letters in that order

somewhere in the word, eg if I typed in the letters H,S,E I would like the computer to respond with answers such as hose, haste, etc. . .

I am quite prepared to type in all of the words in the English language. Is 512k enough memory? I hope it is.

Please give me a printing in your magazine or give me a reply. I am desperate.

Also could you give me more information on Genlock and Scott-Draw. *Scott Morris, Bristol*

Wow, you want to type in all the words in the English language eh? Perhaps I should point out that even for a modest 20,000 word dictionary (for such is what you would be creating) you would need something in the order of 120 kbytes of memory and assuming a speed of 6 words a minute it would take you about 10 days, trying for about 6 hours a day, just to enter the data! It is also assuming you didn't make any mistakes in that time! That certainly wouldn't give you ALL the words in the English language by any stretch of the imagination and about 80,000 words might be getting a bit closer to a practical figure. If for your best bet would be to obtain a word processing program with a large spelling checker dictionary and use that. You would need to find out how the dictionary was stored since virtually all commercial

dictionaries rely on text compression techniques to store such a large quantity of text and yet retain fast search times. While I can't give you the program in detail, since it depends on what the source data is, the principle is as follows: 1. Go straight to the part of the file containing the words starting with the first letter.

2. Read in all the words in that section sequentially, carrying out the following for each word in turn.

2A. Use the 'string within string' (INSTR) search to find the position of the first occurrence of the second letter. If there is a match, ignore it and go onto the next word.

2B. If it does match, then search from 'the position of the match + 1' for a match on the second letter. If you find one then print the word, otherwise go onto the next word.

I have to say that interpreted BASIC will be a bit slow for the sort of thing and that a compiled language such as C, or Modula-2 would be far superior in terms of speed of response.

Genlock will allow you to combine a TV picture with the output from your Amiga so that they appear on the screen at the same time, it costs £270 for the AS500 version. Digi-new will allow you to capture pictures in either colour or B&W from a suitable video camera for display (and storage) on the Amiga, it costs about £180, but this does not include the camera. Only static images can be captured in colour.

Screen grabber

● I have a few problems with my Amiga 500, which I hope you can help me with.

What is the difference between the Commodore A101 disk drive and the Cumana 1 megabyte drive?

Can I buy a utility that can grab high-resolution games screens to be edited on Deluxe paint or to be displayed using slide show software, where can I get it and how much will it cost?

What is the cheapest colour printer available for the Amiga?

I would be very grateful if you can answer my questions. *Nail Soft, Wilsenhall, W. Mids*

There are only two real differences between these two drives: the name and the price! As far as the Amiga is concerned the Cumana Drive will function in exactly the same way as the Commodore drive (as will the vast majority of the other 'clone' drives on the market). Note that the 1 Mbyte referred to is the unformatted capacity;

the formatted capacity is still 880 kbytes.

I regret to say that I don't know of any program or utility that will enable you to capture a hi-res screen from an Amiga game and store it on disk. If anyone out there knows of such a utility, please drop me a line, I'm sure many people would be interested. The cheapest colour printer for the Amiga has to be the OKIMATE 20, at only £229. It has a few disadvantages however, since it uses a four colour transfer ribbon, with each colour following in sequence along the plastic strip that comprises the 'ribbon'. Thus if you only use one colour for anything you still go through the ribbon at one half of a rate (and it's a once through ribbon as well) and it is also pretty slow. The advantages are price and a surprisingly good colour quality, better than a d.e.m.-matrix colour printer such as the Jule 5520.

For general versatility however, I use the Jule since this will give both N.I.Q. printing using a standard black ribbon as well as an adequate colour quality using a 4-colour ribbon, and fully emulates the EPSON JX-80. It is more expensive though, at around £390.

Finally, there is the CANON P11080A colour ink-jet printer at around £340 from Preprint Software, but although giving good colour graphics it suffers from poor print quality. You will also need a printer driver program for the CANON at around £11 in order to use it with the Amiga.

Monitor

● I have a 1901 monitor, and I am planning on getting an Amiga. I am planning on sending my monitor to Trilogic to have it upgraded. I have two questions. Will the monitor be able to display the highest resolution of the Amiga? Also could you tell me whether it will be still possible to get stereo sound? *Kevin Sooben, Herts*

The conversion will allow the 1901 to display the same resolution as the normal Amiga monitor, the 1081. It will also allow the display of all 4096 colours, which is probably more important. You will find that you will get the same flicker effect when using the 'interlaced' hi-res mode, but most standard monitors have this problem so you aren't losing anything there.

There is only one speaker in the 1901 so you won't get stereo sound out of it, but since the Amiga sound comes out of separate connectors at the rear you can easily take the sound through a parabolic cassette player which has a stereo line input to give full stereo effects.

WHEN WE LEFT LAST
ISSUE OUR DUMB-
ASS DUO WERE JUST
